Task 3b	pages 165-172

Digital Production, Design and Development

Introduction

This document contains the Grade Standard Exemplification Materials (GrSEM) which includes student work.

The purpose of this material is to support centres and students in their understanding of the requirements of the Occupational Specialism component of the Technical Qualification and to prepare for future submissions.

The student work submitted was marked and awarded at the boundary of the grade indicated within the document. It should be noted that the portfolio of work provided may include tasks (and elements of) which perform above, at and below the final awarded grade and the holistic grade for the portfolio is made up of the performance across all tasks.

The portfolio provided is typical of a learner performing at the grade awarded for the Occupational Specialism and should therefore indicate an indicative level of performance to achieve that grade.

This document should be used in conjunction with the task booklets, mark scheme and most notably, the Lead Examiner report. These documents can be found on the Pearson website here [Digital Production, Design and Development | Pearson qualifications](#).

The duration of this assessment is 87 hours of supervised sessions spread over a period of 14 weeks.

The assessment is split into four tasks covering a range of topics. These are summarized below:

Task	Topic	Evidence	Time
1	Analysing the problem and designing a solution	Proposal of the designed solution A set of design documents	20 hours
2	Developing the solution	Prototype	30 hours

Digital Production, Design and Development

		Development documents Test log Code for prototype solution	
3a	Gathering feedback to inform future development	Plan and report on gathering feedback	15 hours 30 minutes
3b	Evaluating feedback to inform future development	Feedback evaluation report	2 hours

Visual/Interface designs

Logo

This logo I have created using Canva, the main inspiration lies in the name of the brand – “Riget”, which I have found to be an anagram for Tiger, thus the icon of the tiger. As the brief did not mention when the zoo was founded, I have used a random 1999, however it can be changed, when the client mentions the real date. I find this logo to be inclusive as it is sensible enough for children, however not too childish for adults.

Colour Scheme

This colour scheme was chosen, after I conducted research into industry. Specifically, I have looked into the competitors’ websites that are located in the Great Britain. What I found was that green and orange were dominant colours. I find it very sensible since it resembles how zoos actually look with a lot of green areas and animals with the orange fur.

As well as that I have looked into archetypes and how these colours would fit in.

This is the Colour palette I came up with, using <https://coolors.co/>.

With

```
#aea593, #3b3b46, #6f6634, #71725a, #2e2f39, #979d95, #ffffff, #44513e,  
#be8e4b
```

Array

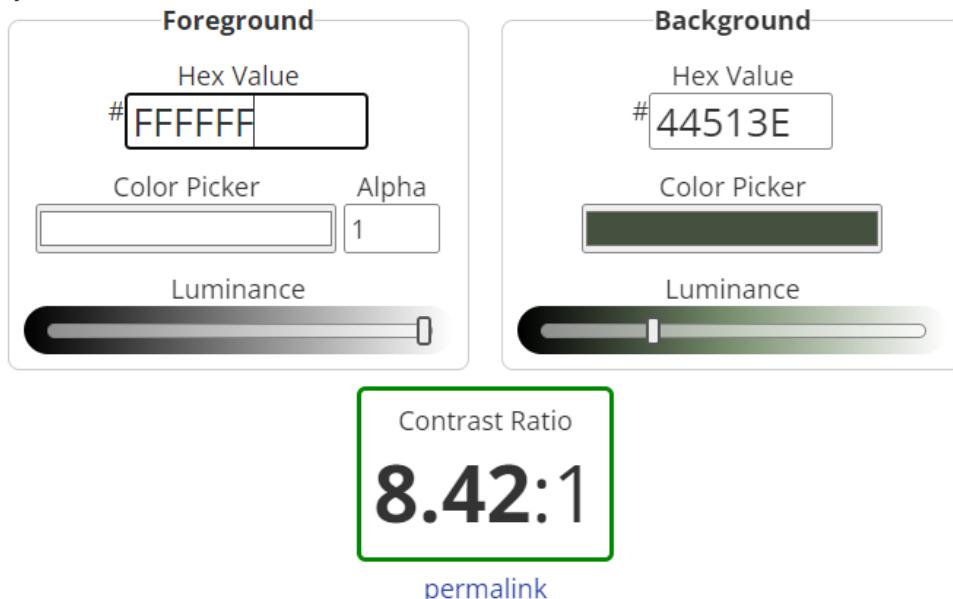

```
["aea593", "3b3b46", "6f6634", "71725a", "2e2f39", "979d95", "ffffff", "44513e",  
"be8e4b"]
```

Object

```
{"Khaki": "aea593", "Onyx": "3b3b46", "Field drab": "6f6634", "Reseda  
green": "71725a", "Raisin black": "2e2f39", "Battleship  
gray": "979d95", "White": "ffffff", "Ebony": "44513e", "Lion": "be8e4b"}
```

When doing the design in Figma, I was constantly checking the contrasts and colours for compliance with WCAG, for that I have used WebAIM website.

First combination that I used a lot through out the website UI design, was white on the ebony.

Graphical Objects and User Interface Components

WCAG AA: Pass

Text Input

For some of the ideas, like the one below I had to adjust, this was for some of the buttons.

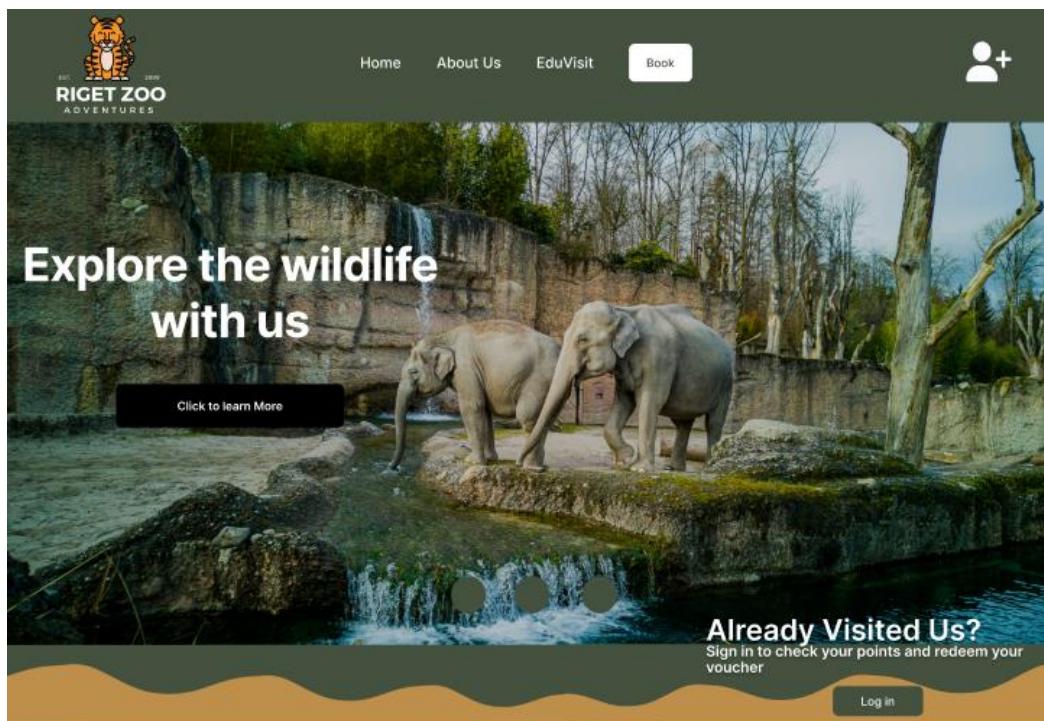

Navigation bar

In the following pages I will attach all the designs that I have made using Figma. I want to mention though, that some of it might be undergoing slight changes once the development of the prototype starts. For example, the booking system is a bit more complex than it is illustrated in the UI designs I've produced, therefore I will need to adjust it to the backend once in development.

Home Page

The banner features a large photograph of two elephants standing on a rocky bank next to a waterfall. Overlaid text reads "Explore the wildlife with us". A black button labeled "Click to learn More" is positioned in the upper left corner. In the bottom right corner, there's a "Log in" button and a message: "Already Visited Us? Sign in to check your points and redeem your voucher".

We offer a range of educational activities

The screenshot shows the homepage of the Riget Zoo website. At the top, there is a dark header bar with the Riget Zoo logo featuring a tiger, followed by navigation links for Home, About Us, EduVisit, Book, and a user profile icon. Below the header is a large banner image of a person playing a guitar. Overlaid on this image is a dark rectangular bar with the text "Welcome [User]". In the top left corner of the banner, it says "Points: 4". In the top right corner, there are links for Bookings, Visits, and Log out, along with a user profile picture and a dropdown arrow. A central call-to-action button with a blue gradient background and white text reads "Manage my bookings". Below this button is a graphic for a "VOUCHER" with a yellow percentage sign and blue gift boxes, accompanied by the text "Redeem my voucher". At the bottom of the page, there is a footer bar with the Riget Zoo logo and social media links for Facebook, LinkedIn, YouTube, and Instagram. The footer also contains links for About Us, Educational Visits, Book, Opening schedule, Materials, Hotel room, Our Animals, Advise, Buy tickets, and Hotel info.

A test strategy

Considering the scope of the project, we are going to be using manual testing. However, for future considerations, automated testing also can be used.

Date of test	Component to be tested	Type of test to be carried out	Prerequisites and dependencies
18 April 2024	Navigation bar	Black box testing -> Functional testing: Integration testing	No data inputs needed at this stage, tester will go through the navbar and test if all the correct pages are loaded. EX. clicking on about us should load about us page
18 April 2024	Homepage	White box testing, Black box testing -> Functional testing: Integration testing, Unit testing	No Data needed. Testing if all the buttons are functional, testing homepage unit, testing integration of homepage within the website.
18 April 2024	About Page	White box testing, Black box testing -> Functional testing: Integration testing, Unit testing	No Data needed. Testing if all the buttons are functional, testing about page unit, testing integration of about page within the website.
18 April 2024	Educational visits page	White box testing, Black box testing -> Functional testing: Integration testing, Unit testing	No Data needed. Testing if all the buttons are functional, testing educational unit, testing integration of eduvist within the website.

18 April 2024	Booking page	White box testing, Black box testing -> Functional testing: Integration testing, Unit testing	No Data needed. Testing if all the buttons are functional, testing booking page unit, testing integration of booking page within the website.
20 April 2024	Booking System	Backend-> database testing	Test if any errors are shown while executing queries. Test data needed for booking a ticket: CustomerId, time_slot, ticket_type; Test data needed for room booking: CustomerId, Date_from, Date_to, Quantity
18 April 2024	Login page	White box testing, Black box testing -> Functional testing: Integration testing, Unit testing	No Data needed. Testing if all the buttons are functional, testing login unit, testing integration of login page within the website.
20 April 2024	Login system	Backend-> database testing	Test data needed: Valid username and password and invalid to check the robustness
18 April 2024	Sign up page	White box testing, Black box testing -> Functional testing: Integration testing, Unit testing	No Data needed. Testing if all the buttons are functional, testing sign up unit, testing integration of sign-up page within the website.

20 April 2024	Sign up system	Backend-> database testing	Test data needed: Name, username, password, repeat password, email
18 April 2024	Navigation bar	Black box testing -> Non-Functional testing: Compatibility testing	OS needed: IOS, MacOS, Windows, Android Browsers: Chrome, Edge, Firefox, Opera, or Safari
18 April 2024	Home page	Black box testing -> Non-Functional testing: Compatibility testing	OS needed: IOS, MacOS, Windows, Android Browsers: Chrome, Edge, Firefox, Opera, or Safari

Business context

Our client, Riget Zoo Adventures (RZA), is a well-established business that is interested in digitalisation in order to keep existing customers satisfied as well as engaging new clients. Currently RZA offers a safari-style wildlife zoo, an on-site hotel and educational visits. A client is looking for a digital solution that would information about attractions and facilities, materials to support educational visits and allow users to book tickets and stays in the hotel.

I am proposing to develop an interactive website that would include all the features that the client requires and some more. In the following passages I will be explaining and justifying my proposal.

Empathy map

Says	Thinks
<ul style="list-style-type: none">- I need more information before visiting this zoo.- Could I buy a book that has all the animals description, so I get to learn while I'm on my educational trip as well?- Could I book my tickets and book a hotel in advance via website?- Could I create my account so I could manage my bookings? I need to cancel my booking for this Saturday because my child is not feeling well.	<ul style="list-style-type: none">- I wish there was a website where I could see all the animals, it would be easy to decide if I want to go this zoo- It would be so much easier if they just had a booking system and I could book a ticket in advance instead of standing in the line for hours.- I would rather book a hotel in advance, what if there are no rooms left when we visit.- Oh, I wish I had more personalised experience, I wish I had my own account. I don't want to lose my money just because I couldn't cancel my visit.
Does	Feels
<ul style="list-style-type: none">- Comes to the zoo with very little awareness- Comes to visit, but the zoo is too full today- Comes to visit and finds out that the hotel is overbooked	<ul style="list-style-type: none">- Overwhelmed- Confused- Stressed and annoyed because of the que to by ticket- Willing to be reassured that the hotel is booked for the time they come

User stories

As a [user]...	I want ...	So that ...	Acceptance Criteria
First time customer	To visit a website and find some information on what the zoo is offering.	I can compare it with other zoos and see why I should choose this one, as well as that I would be able to see if	The system should allow user to see the clear navigation bar at the top, in the main section there should be

	Book my tickets quickly online.	there are animals that I am particularly interested in. I will not have to wait in the que for tickets, when I visit.	a carousel in the main section that will prompt users to all the other sections. When user visits the about page, all of the necessary info will be displayed in there such as how to get here, opening times, animals, facilities, hotel info. On the top right corner there will be a "Book" button that will prompt user to the booking page, it could be a ticket booking or a hotel booking.
Student	To visit website that is easy to follow and does not have unnecessary information, I also want to find educational trip section on there where I can browse and get all necessary materials for my trip, for ex book that describes all the animals that I'm going to see in the zoo.	When I am on my trip I was fully aware of what is going on and had enhanced experience, I also want to learn more when I'm on the trip.	The system should provide the educational visits page for students. On this page there should be a catalogue of things that they might need while on the trip.
Parent	To book a hotel and tickets in advance	I'm sure that when I come with my children we will have where to stay, and I will not need to drive all the way back home the same day.	In the booking area there is an option to book a hotel.
Loyal customer	To have a discount when I visit for the second time. To have my account where I would see how when I have visited. And to be able to cancel my future bookings if I need to do so.	If I visit multiple times, I can save some money. I also want to feel a more personalised experience.	The website should contain an option to create an account and login. When user is on any of the pages, he/she should be able to easily navigate to the Account section. When on the Account page, user should be able to Manage bookings, have reward for each visit. See his/her previous visits.

Functional Requirements

Homepage

The system should display homepage that consists of Navigation bar, main section and footer. In the main section website provides A carousel of pictures with links that prompt user to other areas of the website, ex about page.

No data inputs required for this page.

When the user clicks on the links to different pages it should go to the required page. Ex. User clicks on the Book button, it should quickly navigate the user to the booking page.

Navigation Bar consists of:

- Home
- About
- Educational visit
- Book
- Account

About Page

The system displays the about page which is similar to the homepage and consists of the navigation bar, main section: Opening times, Our animals, Hotel info, How to get here; and a footer.

No data inputs required for this page.

Educational visits page

The system displays the educational visit page which consists of the navigation bar, main section where the user can browse the catalogue of useful materials for the educational trip and the pricing of it, as well as that user should be able to download a pdf guide with all the animals that are in the zoo.

No data inputs required for this page.

Booking system

The system should have two services options to book: book a room or book a ticket. Then user the correct form should be displayed, first user is prompted to select a day and timeslot, then fill in personal details. After user fills in the form, order should be placed and sent to the database, user should see the message of the successful placement or in case of any errors a message that something went wrong during ordering.

User input requirements:

Booking a room	Booking a ticket
<ul style="list-style-type: none">•Stay from [], to []•Room type (Single room, Double Room, Twin Room, Double Room - Disability Access)•Number of visitors•Full name•Email	<ul style="list-style-type: none">•Date and time•Type of ticket (Adult, Child, Student, Educational trip)•Full name•Email

Personal Account

The system should allow user to create an account, or sign in, if the account already exists. Once signed in to their account user should be able to manage their bookings ex. cancel, user should also see previous stays and rewards. The system should allow user to log out once needed.

User input requirements to create an account:

User input requirements to login into the account:

Non-functional Requirements

Security

The system should be secure and robust:

- System must validate all data inputs.
- System must use secure cookies.
- System must use SHA256 Encryption for the passwords.

Maintainability

It is important that after deployment system can be maintained cost-effectively.

To ensure good maintainability, I will only use good coding practises throughout the code, I will ensure that naming conventions are relevant and easy to follow, I will only use standard API formats.

Performance

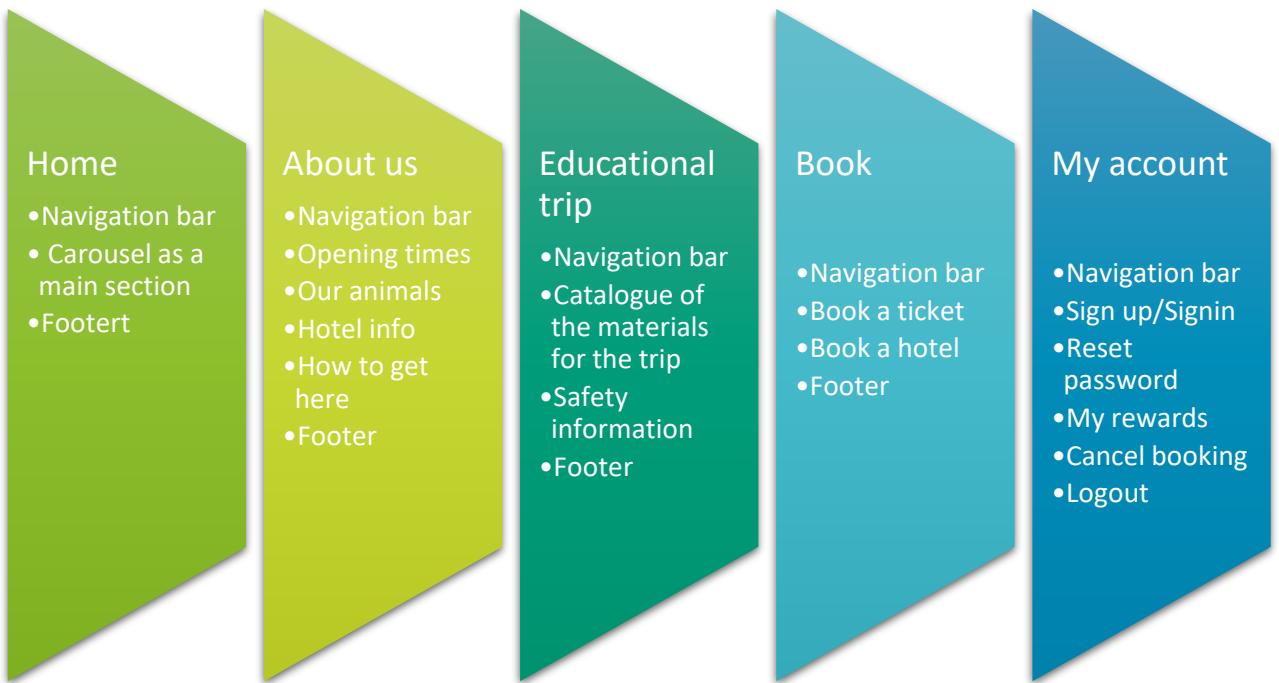

- Page speed/load: webpage should be loaded within 2-6 seconds.
- Latency: it should take not more than 100 milliseconds for system to respond to the user.
- The system should not be overloaded with API calls, as they might slow down the performance.

Usability -> Accessibility

The system should be straightforward to use, both for the end-users and the content editors that oversee backend system.

System should be adapted to different user needs: the system should be following Web Content Accessibility (WCAG) guidelines.

Decomposition

KPI's

Business KPI's

Trustpilot reviews

the higher the ranking on the third party's ranking websites such as Trustpilot the better it is for the business, the reason being is that usually people look for the best option and it is crucial for them to be able to see what other people that have already visited place think, it is due to complex human psychology. Recent example: to conduct research and make a valid proposal I first had a look on the Trustpilot to see what competitors offer.

Visitor satisfaction rate

it can help identifying areas of improvement and therefore boost customer's experience. One way to track this KPI is to ask customers to fill in short surveys. Industry standard is to keep this rate 80% and higher, however the higher rate, better it is for the business, meaning that everything is managed to the highest standard. One drawback is that sometimes customers are too busy to do it and some of the are not bothered to read the question properly. To mitigate that, we need to make sure that the questionnaire is short and has an engaging element to it.

The number of educational programs offered

this can allow the business to make strong connections with public and have even more customers. It can be calculated by adding all of the programs offered per year. If the number growth over years that would mean that business has an adequate scaling up.

Percentage of repeat visitors

It shows us the business' ability to maintain customers. Therefore, if there's a drop in this percentage business can easily spot that there is a problem with customer satisfaction and thus perhaps, they should consider their customer service more. This KPI will allow business to identify areas for improvement and faster long-term loyalty. In order to calculate this KPI business needs to have the number of repeat visitors and total amount of visitors. Then divide repeat visitor by total visitors and multiply by 100.

Revenue growth rate

Asses RZA's financial performance, which can help to perform better informed decisions. The higher the business revenue growth rate the better.

Website KPI's

Page Load time

It is essentially how long it takes for page to load and appear on the user's screen. It is crucial that this time is as low as possible. Even few seconds can result into the loss of the potential client. With the development of the digital sector, people tend to wait less and less if there are any troubles accessing website as they are well aware of the vast amounts of options they've got.

This KPI can be seen using reporting tool, for example Google Analytics.

Bounce Rate

This KPI shows the percentage of users that visit the website and then leave immediately without taking any actions. It is logical that if this rate is high the website is either performing poorly or it is simply not appealing well to the user, one other reason might be hidden in the advertisement, if the website is offered to the wrong audience, it might be that they click without any interest in the sector at the first place. A good website though will keep the visitors to interact at least with few pages before leaving. Therefore, it is a crucial tool that will allow to see if the website needs any changes or not.

Traffic by source

It allows to see different sources of traffic. For example, what devices are most used to visit the website, and therefore RZA could investigate further development of that device. If let's say most traffic comes from smartphones it is sensible to develop a mobile app.

Conversion rate

It indicates how well the website prompts customers to complete the action desired by the client. For example, RZA wants to have n number of bookings and y amount of account registrations per day then we would need to take those two goals per specific amount of time and divide it by total number of users and multiply it by 100%.

It is important that this rate is reasonably high, if the rate is low that would mean that the website is doing its function very poorly.

Average time on page

It shows us how much time on average user spends on the website. Depending on the page this time can indicate different outcomes. For example, if the average time on the homepage or about page is high it's a good indicator as it shows that the content is engaging and relevant for the user however if KPI is high on the booking page then that might show that there are some errors or it's hard for the user to understand. And thus, some changes should be made.

A description of proposed solution

In the above paragraphs I was decomposing, analysing, and setting the requirements for the system. In this section I will be summing up the proposal and its main benefits to the client – RZA.

The final proposal is an interactive website that will include following

Key features and benefits:

- Inclusive solution

The website is going to be an inclusive platform that will allow all users navigate through and use its functionality. In this way RZA will ensure that all customers will be included and therefore satisfied with their services.

- Quick and easy booking

One of the most important features is booking a ticket or a room in advance, which will help reduce queues for the tickets kiosks in the Zoo, as well as that users will be assured that they will have the place to stay overnight, not worrying that the hotel is overbooked.

- Materials for educational visits

The website will allow students and their parents to see all the necessary information and materials for educational visits. As well as that they would be able to download a pdf with all the animals in the Zoo.

- Info Blocks

Will provide customers with information about the zoo and facilities, opening times, hotel, and animals

- Personalised experience

For loyal customers website offers to create an account and have some awards for each visit, for example a discount coupon. As well as that, customers will be able to see their previous visits and manage their current booking. Which will ensure that customers receive personalised experience and come back to the RZA.

Justification

In the above paragraphs I have proposed a digital solution to the client. Which is an interactive website that meets different users needs, I have also stated the requirements: functional and non-functional and provided decomposition. In this section I will be justifying my proposal.

How the recommended solution meets the needs of the client.

Inclusion-driven solution

One of the client's needs is to support a wide range of customers, therefore a lot of emphasis will go into making sure that the website is built with all the customers in mind. The frontend will be developed based on the reliable Bootstrap templates, that follow WSAG. All the colours and contrasts will be checked before implementing the design into the prototype.

The reason being we want the website to be accessible for everyone, ensuring that all the customers are having a good experience. As well as satisfying existing customers, website will be a powerhouse for engaging new customers.

Efficient way to buy and book

Another client requirement is to allow users to book tickets and hotel rooms online. The website will contain an easy to navigate booking system with a robust backend and database. This will help our client to keep track of all the tickets sold and rooms booked. Client will be able to analyse this data and make a better informed strategical and technical decisions. On top of that customers satisfaction rate will grow as they don't have to waste time in the que and worry about availability of rooms in the hotel.

All about educational visits section

Another client need was to support educational visits. I'm proposing to make a separate page dedicated to the educational trips where all the necessary information will be displayed. In this way it will be easy to spot on the navigation bar. And this will help to enhance students' experience.

Informational blocks

Another feature that client required is to do with information about attractions and facilities. What I have proposed is to make an about page where end-user could find all the necessary information. After research into industry, I have found that most of the zoo websites have the animals' sections, where users could see all the current animals in the zoo.

I think it is a reasonable feature to add as it will help customers to make more informed decision. Perhaps, RGA has exactly the animal that one of the protentional clients wants to see, this would bring a new customer. However, if the opposite happens and the customer is interested in the particular animal, but that animal is not in the Zoo, then it would be sensible to the user not to come, which is also a benefit for RZA, as this customer will have a very high chance of coming out not satisfied, which could lower RZA ranking on the third-party rankings' website.

As well as animals' section, I have proposed to add information about the hotel, opening times and attractions. Which will keep protentional customers informed.

Personalised user experience

As an additional feature client has mentioned that users could have their own accounts and perhaps a loyalty system. What I have proposed is a robust registration / login system. Users will

be able to create an account and have some awards for each visit, for example a discount coupon. As well as that, end-users will be able to see their previous visits and manage their current bookings. This will improve their experience with RZA and therefore promote brand's reputation. In the long-term allow RZA for scaling up.

How potential risks will be mitigated.

In the proposal above I have mentioned that the website will contain following features: Info page (About Page), Educational visits, Booking system and personalised account system with loyalty program. In this passage I will walk through the potential risks and their mitigations.

Informational inaccuracy (Poor data quality)

This could lead to lost revenue, poor customer experience and in long term even to the reputational damage.

The way to mitigate it is to hire staff that will oversee editing content and making sure it is up to date. Although for the scope of this project I will not be implementing CMS (Content Management System), it might be a sensible solution for further development, as it will reduce the complexity of maintaining the website, therefore increase efficiency. The reason being is that it allows for content change in a nice user-friendly interface, which essentially does not require programming knowledge, therefore could be done by content creators.

Miscommunications with schools and students

when it comes to educational visits can be an issue, when not handled gracefully. One example could be arranging a visit for the wrong time slot. Another could be misleading information about materials required on the web page. This frankly leads us back to the information inaccuracy issue and the way to mitigate those would be quite similar, however I would highly suggest that there are delegated to manage educational programs. In case of, something going wrong, they would be able to quickly react to the circumstances and come up with a solution.

Booking system – data loss

There are a handful of risks when it comes to the booking system and its implementation like overcomplicating the booking process, not having enough customer support, failing to customize accordingly to business needs. However, what I want to concentrate is system glitches and data loss which could be dreadful to the business reputation. For example, if the data loss happens and the customers that booked a hotel to stay the night, it would be extremely unpleasant experience to them having to change their place and looking for different place on the day of a visit.

To mitigate this, the system must be thoroughly tested. However, for data loss it's not always sufficient, therefore data backups will be a reasonable solution to this potential risk.

Personalised account – data breaches

One of the risks with the most consequences is a data breach. As for the login system, we will gather some customer information, there is always a risk of this data to be stolen. To mitigate this, company should have a robust security plan, that comprise of multiple prevention technics. For this scope I will be implementing password encryptions to enhance the security.

Regulatory guidelines and legal requirements will be addressed.

To make sure the solution that I have proposed above meet the low, I will ensure that the website is compliant with such legislations as GDPR (General Data Protection Policy), COPPA(Children's Online Privacy Protection Act), EU Cookie Law.

Appendix 1

Hardware and software

1. Contactless payments

One of the most important developments, especially in times of the pandemic, is that technology has enabled contactless payments. Additionally, customers might not always be carrying their credit or debit cards on them at all times or don't have immediate access to cash. Enabling cashless transactions makes the whole experience more accessible for clients, as everyone has a smartphone these days, and it also saves time and effort for both customers and employees.

Contactless delivery used to be a convenience earlier, but lately, it was more of a necessity than a convenience because of COVID-19.

2. Voice control

Voice control and voice search options are a massive step towards making the travel industry more accessible for everyone. Most of the apps were not accessible to people with visual impairments, and enabling voice controls will make the apps and websites accessible to a whole new demographic.

Besides the booking experience, voice controls and search options can also help make the customer experience more interactive and exciting by including voice control lighting and heating within hotel rooms and assisting tourists with information about a particular location.

You don't need to have a huge team to help you with tech for your business. You can even hire remote software developers who are highly qualified and can assist you in implementing technology in your operations.

3. Robots

That is probably one of the most exciting advancements in recent times. While voice recognition and cashless transactions have more or less become a norm in our everyday lives, it's not often one gets to see machines doing daily tasks.

Restaurants and hotels can largely benefit from implementing robot technology in their operations. For example, robot support can reduce human effort in food preparation, luggage transport, and other deliveries.

For example, at the Dubai Expo, a food delivery company called Talabat had a marketing campaign advertising the future of food delivery – with GPS-powered robots. This achieved two purposes – it made the brand stand out and therefore made it memorable, making its mark in the customer's minds.

As a business, you should always strive to make a memorable impression in your customer's minds, and Talabat successfully did that by using robot technology in their campaigns.

4. Virtual Reality (VR)

Virtual Reality has become a huge thing, with big names like Meta trying to make their mark in VR. VR will definitely be a massive part of our future, and businesses across various sectors and industries are already accommodating VR in their operations. Travel and Tourism is one of the biggest industries that have the potential to use virtual reality.

For example, with the help of VR, tourists will be able to have a glimpse of the place they're visiting before going there. It's like a trailer of a vacation to help customers make an informed decision.

Thomas Cook made the most of VR technology when they introduced their 'Try Before You Fly' initiative that let people take a virtual tour of the city and its key attractions before deciding if they want to visit. That gave them an edge over their competitors, and as we mentioned before, it made a memorable impression on the consumer's minds.

6. AI-powered chatbots

We've spoken before about how automating processes makes operations convenient for everyone and reduces human effort. Of course, customer service is a big part of that process.

Since most travel-related bookings are made through the internet, there are no fixed timings, and customers often make their reservations at night. Naturally, it's impossible to have a customer service team working round the clock. With the help of artificial intelligence, chatbots can be programmed to help customers complete search queries and get answers to commonly asked questions in live chat without having to speak to a customer service representative.

However, it's understandable that machine learning is not yet equipped to replace human effort altogether. For queries beyond AI chatbots' capabilities, you can hire a virtual assistant to help with customer service.

Emerging technologies

Interactive Maps

Advanced software solutions have become indispensable tools in our interconnected world, reshaping the way we navigate and understand our surroundings. In 2024, mapping

technology has evolved beyond mere directional guidance, offering companies and users a comprehensive and dynamic experience. These interactive [mapping software](#) solutions incorporate real-time data, satellite imagery, and machine learning algorithms to provide accurate and up-to-date maps. Businesses can use these interactive tools to customize their maps to meet the needs of their audiences.

Whether used for urban planning, logistics optimization, or travel navigation, mapping software has transcended traditional boundaries. It not only enables users to find the quickest route from point A to point B but also facilitates a deeper understanding of geographic landscapes. With features like augmented reality overlays and interactive layers, mapping tools continue to redefine our spatial awareness, making them an essential companion in our daily lives.

Augmented Reality (AR) for Enhanced Experiences

For travel and tourism companies aiming to remain competitive, the integration of augmented reality into customer experiences is essential. The AR market is projected to experience a remarkable [CAGR of 38% by the year 2030](#). This growth forecast underscores the increasing importance of AR in the industry, highlighting its pivotal role not only in enhancing customer engagement but also in securing a competitive edge for businesses within the travel and tourism sector.

In 2024, we can expect AR to become an integral part of travel apps, providing users with real-time information and enhancing the experience of their surroundings. Imagine walking through historical landmarks and using AR to witness ancient civilizations coming to life or getting instant translations of street signs. AR will bridge the gap between the physical and digital worlds, offering tourists a more immersive and interactive journey.

Blockchain for Secure and Transparent Transactions

Blockchain technology is gaining traction in the tourism industry, offering secure and transparent transactions. By 2024, blockchain will likely become widely adopted for booking accommodation, flights, and travel services. Its decentralized nature ensures transactions remain tamper-proof while simultaneously lowering fraud risk.

Smart contracts will automate processes, ensuring seamless and secure interactions between travellers and service providers, ultimately fostering trust in the industry.

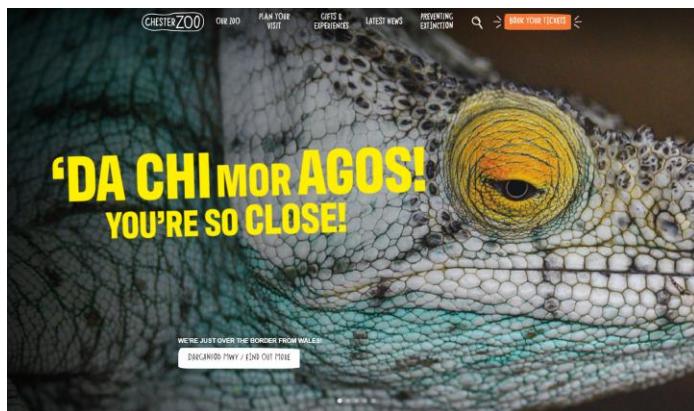

Artificial Intelligence (AI) for Personalized Travel Experiences

Artificial intelligence is becoming increasingly sophisticated in tailoring travel experiences to individual preferences. In 2024, AI-powered travel assistants will be the norm, providing personalized recommendations for accommodations, activities, and dining based on travellers' preferences and past behaviour.

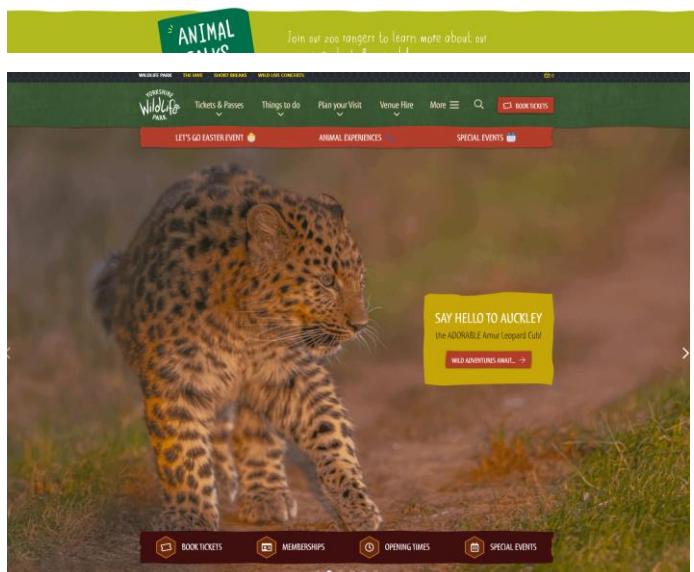

Machine learning algorithms will continuously refine suggestions, ensuring that each trip becomes a unique and tailored adventure. AI will also play a crucial role in customer service, with chatbots providing instant assistance and support throughout the travel journey.

Meeting different user needs

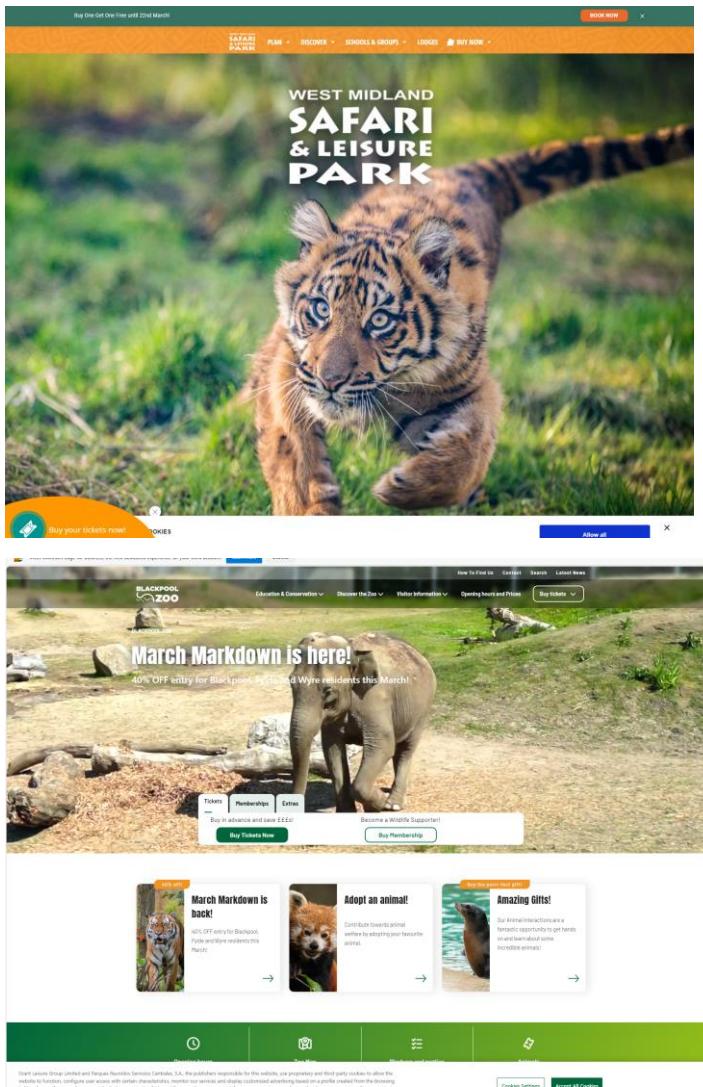

A clear and easy to navigate website, adapted so children can look through it as well. The examples that I have researched are: Chester Zoo, Yorkshire Zoo, Colchester Zoo, West midland Safari Park and Blackpool zoo.

Welcome to CHESTER ZOO

How the information about attractions and facilities is displayed:

The screenshot shows the Chester Zoo website's animal page. At the top, there is a banner featuring a lemur with the text "Meet our ANIMALS" and "Discover the beautiful animals & habitats at Chester Zoo". Below the banner, there is a search bar and a dropdown menu for "ANIMAL GROUP" with "Open all" selected. The main content area displays a grid of 80 animal cards, each with a thumbnail image and the animal's name. The animals listed in the grid are: Aardark, African painted dog, Andean Bear, Anoa, Asian elephant, Asian short-clawed otter, Aye-aye, Babirusa, Banteng, Black lemur, Black rhino, Bornean orangutan, Brazilian salmon pink bird-eating tarantula, Bush dog, Capybara, Caribbean flamingos, Cheetah, Chimpanzee, and Howler monkey.

The screenshot shows the Yorkshire Wildlife Park website. At the top, there's a navigation bar with links for 'Tickets & Passes', 'Things to do', 'Plan your Visit', 'Venue Hire', 'More', and a search bar. Below the navigation is a banner for 'LET'S GO EASTER EVENT' featuring a large otter. To the right, there's another banner for 'ANIMAL EXPERIENCES' showing children on a swing. The main content area has a dark green header with 'ANIMALS' and a sub-header 'Explore the incredible animals that call Yorkshire Wildlife Park, home!'. Below this, there are filters for 'Filter by Group', 'Filter by Land', 'Filter by Experience', and a search bar. A 'Sort by' dropdown is set to 'Recommendation'. There are four animal cards: 'POLAR BEARS', 'LIONS', 'SEA LIONS', and 'TIGERS'. To the right, there are four play area cards: 'JUNGLE LOOKOUT', 'MONKEY PLAYHOUSE', 'BIG BUG PLAY ZONE', and 'OASIS ADVENTURE PLAY'. A red banner at the bottom right says 'PLAY AREAS'.

The screenshot shows the Colchester Zoo website. The top navigation includes links for 'About Us', 'At the Zoo', 'Plan Your Visit', 'What's On', 'Gifts and Experiences', and 'Support Us'. The main banner features a tiger's stripes with the text 'At the Zoo' and 'Our Animals'. Below the banner is a grey navigation bar with buttons for 'BOOK TICKETS', 'EVENTS', 'OFFER & DISCOUNTS', and 'SUPPORT US'. A sub-header 'Discover over 155 species!' is followed by a note: 'Navigate through our enclosure list below to find out what species you can discover here at Colchester Zoo.' Below this are two rows of animal enclosure cards. The first row includes 'Aardvark Burrow', 'Australian Rainbows', and 'Bears of the Rising Sun'. The second row includes a wolf, a lion, and a chimpanzee. Each card has a 'FIND OUT MORE' link.

Guidelines and Regulations

Legislation	Description
GDPR	If your website is offering goods or services to those located in the European Union, Iceland, Norway, Lichtenstein, Switzerland or UK you must comply with the sweeping privacy laws generated by the General Data Protection Regulation . Complying with the GDPR starts with a comprehensive privacy policy that details what, how, when, and where data is collected.
CCPA	The California Consumer Privacy Act is a data privacy law that regulates how businesses worldwide are allowed to handle the personally identifiable information of California residents. The CCPA is primarily focused on privacy laws that require that you present a cookie policy that explains the cookies you collect and store and how you or third parties may use them. More on cookie consent solutions below. CCPA is also known for their unique definition of the term "sale", and if your website is in business of selling personal information this is the one you should study closely.
CPRA	In November 2020, an addendum to the CCPA was put in place that strengthened the depth and breadth of California's data privacy requirements. The California Privacy Rights Act is a powerful data privacy law that affects the privacy and notice requirements for websites that may be accessible to consumers in California. The CPRA expands on the CCPA by requiring that websites that share personal data be fully compliant with all privacy laws. Previously, only websites that sold data had to be compliant. The CPRA goes into effect Jan. 1, 2023.
COPPA	The FTC enforces the sweeping Children's Online Privacy Protection Act to help protect children's privacy and keep them safe online. COPPA website regulations require that websites obtain consent from parents before collecting personal information from kids under the age of 13.
CalOPPPA	In addition to basic GDPR rules, other legal requirements for websites include complying with the provisions of California's Online Privacy Protection Act . Your privacy policy must use the word "privacy" in a direct link from the website's homepage and reveal third-party information regarding exactly who collects data.
EU Cookie Law	The EU Cookie Directive (otherwise known as either the EU Cookie Law or the ePrivacy Directive) requires websites to have a dedicated cookie policy and to get consent from users before they can store or retrieve personal information on a computer, smartphone, or tablet. Designed to protect data privacy, it strives to make customers aware of just how much information about them is collected by websites. This allows for an informed choice regarding whether or not they should continue providing the information.
Eraser Button Law	The Privacy Rights for California Minors in the Digital World Act (also called the Eraser Button Law) applies to websites that allow users under the age of 18 to register and post content. The Eraser Button Law states that these websites must inform users under the age of 18 that they have the legal right and ability to remove the content or information they have contributed at any time.
ADA	The Americans With Disabilities Act requires certain standards for website accessibility for users facing a disability. This means that all electronic information and technology, including your website, must be accessible to those with disabilities.

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.</p>		<p>I will add href to this button so it leads user to booking main page.</p> <pre><div class="d-grid gap-2"> Book </div></pre>
<p>Regression testing, Checking if previous issue was fixed and if the user is routed to the correct page.</p>	<p>No Data needed. Testing if all the buttons are functional, testing educational unit, testing integration of eduvist within the website.</p>	<p>Select button should lead to the booking page.</p>	<p>Button leads to booking page.</p>		
<p>Booking page: White box testing, Black box testing -> Functional testing: Integration testing, Unit testing</p>	<p>No Data needed. Testing if all the buttons are functional, testing booking page unit, testing integration of booking page within the website.</p>	<p>Booking page displays two vertical sections, one prompts to book a room and the other to book a hotel. When user clicks on the book a room the system should check if the user is signed in. If yes route the user to</p>			

the booking if not route the user to the login page with the message: You need to login to book a room.

The image shows a login form titled "LOG IN". At the top right is a search bar with a magnifying glass icon and the placeholder text "Search ...". Below the title is a blue rectangular message box containing the text "You need to log in first to book a room". The form has two input fields: "Username" and "Password", both with placeholder text. Below the password field is a checkbox labeled "I agree all statements in [Terms of service](#)". A green "Login" button is at the bottom. At the very bottom, there is a link "Don't have an account yet? [Sign up here](#)".

			 <p>The main booking page is well integrated within the website. When clicking on book a room or ticket, system indeed checks if user is signed in and if yes lets user to book if not prompts to login with a message.</p>	
<p>Booking System: Test the room booking process.</p>	<p>Test Data: Normal: -Single - From 25/04/2024 To 28/04/2024 - Yes</p>	<p>If user is signed in than he/she can access the booking process, once the test data is entered, new record should be created in the room_bookings table in the database.</p>	<p>The user is signed in and accessed the room booking section, after entering the correct test data a new record was created:</p> <p> <input type="checkbox"/> 7 1 1 2024-04-25 2024-04-28 2024-04-24 11:52:14 </p> <p>And user was routed to the user page where the new booking was added into her bookings with the message: You have successfully booked a room:</p>	

The screenshot shows a travel booking interface for "RIGET ZOO ADVENTURES". At the top, there's a navigation bar with links for Home, About Us, EduVisit, Book, and a user profile section showing "anastasia1234". Below the navigation is a banner with the text "Welcome to your account anastasia1234" and links for Bookings, Visits, and Loyalty Points.

Regression testing.		£ signs are in the correct place.	<p>You have not confirmed your booking!</p> <p>Book your Room:</p> <p>Please select the ticket that describes you best:</p> <table border="1"> <tbody> <tr> <td> Single room £95 per day • Feature • Feature • Feature • Feature • Feature</td> <td> Double room £150 per day • Feature • Feature • Feature • Feature • Feature</td> <td> King room £250 per day • Feature • Feature • Feature • Feature • Feature</td> </tr> </tbody> </table> <p>Select <input type="button" value="Next"/></p>	Single room £95 per day • Feature • Feature • Feature • Feature • Feature	Double room £150 per day • Feature • Feature • Feature • Feature • Feature	King room £250 per day • Feature • Feature • Feature • Feature • Feature	
Single room £95 per day • Feature • Feature • Feature • Feature • Feature	Double room £150 per day • Feature • Feature • Feature • Feature • Feature	King room £250 per day • Feature • Feature • Feature • Feature • Feature					
Booking System: Test the room booking process.	<p>Test Data:</p> <p>Normal:</p> <ul style="list-style-type: none"> - Adult - Visit date: 05/06/2024 - Yes 	<p>If user is signed in than he/she can access the booking process, once the test data is entered, new record should be created in the ticket_bookings table in the database.</p>	<p>The user is signed in and accessed the room booking section, after entering the correct test data a new record was created:</p> <p><input type="checkbox"/> Edit Copy Delete 7 1 1 2024-06-05 2024-04-26 09:09:32</p> <p>And user was routed to the user page where the new booking was added into her bookings with the message: You have successfully booked a room:</p>				

Login page: White box testing, Black box testing -> Functional testing: Integration testing, Unit testing	No Data needed. Testing if all the buttons are functional, testing login unit, testing integration of login page within the website.	Log in page should display login form where user can enter username and password in the bottom of the form there should be an option to get to the sign up page in case you don't have account yet, when the link is clicked it should lead user to the sign up page	Login page works as acpected, it displayes a form and when clicking the link it displayes signup page instead.	
---	--	--	--	--

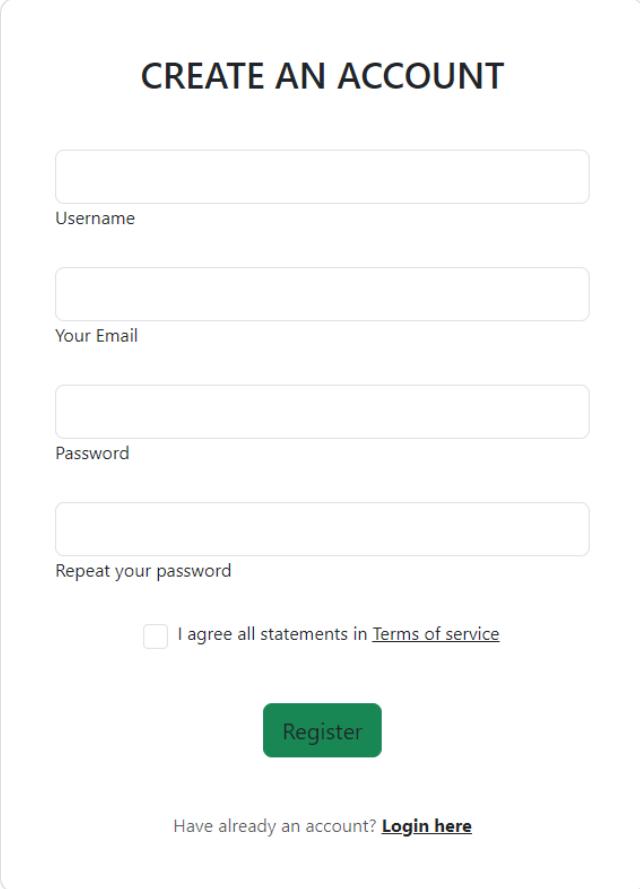

<p>Login system : Backend-> database testing In this test I will be testing validation and thus robustness of the system.</p>	<p>Invalid data: no data or error=emptyinput</p>	<p>The system should catch an error and route user to ?error=emptyinput page that will display error message to the end user saying : You have not filled in all the fields.</p>	<p>I have noticed that I have mistakenly outputed the wrong message even the in the url we can see that the system caught the correct error:</p>	<p>I'm going to change the message that is displayed in the login.php</p> <pre> <?php if(isset(\$_GET["error"])){ if (\$_GET["error"] == "emptyInput"){ echo "<p id='error-msg'>You have not filled in all the fields.</p>"; } } </pre>

Regression testing. Testing to see if the changes work.	Invalid data: no data or error=emptyinput	Correct message is displayed.	 <p>The screenshot shows a 'LOG IN' form with two input fields: 'Username' containing 'anastasia' and 'Password' containing '.....'. Below the fields is a checkbox labeled 'I agree all statements in Terms of service'. A large red error message at the bottom states 'Don't have an account yet? Sign up here' and 'You have not filled in all the fields.'.</p>	
Login system : Backend-> database testing In this test I will be testing validation and thus robustness of the system.	Invalid data(user does not exist): Jhon1234 7777	Error message that says user not found should be displayed.	<p>Similar as in previous test I have displayed the wrong message to the end user, however it is an easy fix since the system cached the error correctly:</p> <p>localhost/rza_adventures/php/signup.php?error=usernotfound</p> <pre>if(\$stmt->rowCount() == 0){ \$stmt = null; header("location: ../php/signup.php?error=usernotfound"); exit(); }</pre>	To fix this I will change the route to /login.php?error=usernotfound in my LoginContr class in classes folder. However that is only one part. As well as that I have to add the error message when this error is caught in the login.php

				file
Regression testing	Invalid data(user does not exist): Jhon1234 7777	Error message that says user not found should be displayed	<p style="text-align: center;">LOG IN</p> <p>The screenshot shows a login interface with a light blue header. Below it is a light blue input field containing the text "anastasia" with the label "Username" underneath. Below that is another light blue input field containing five dots (".....") with the label "Password" underneath. To the right of the password field is a checkbox labeled "I agree all statements in Terms of service". Below the checkbox is a green rounded rectangular button labeled "Login". At the bottom of the form, there is a red error message: "Don't have an account yet? Sign up here" and "This username is not found.".</p>	
Login system : Backend-> database testing In this test I will be testing against valid data, to test if the user is actually logged	Valid data: anastasia1234 1234	User should be routed to the userpage and top left corner in the navigation bar	The Login works as expected :	

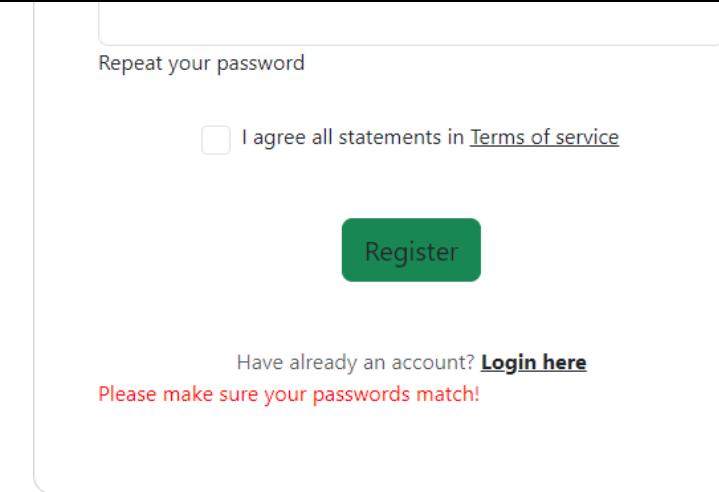

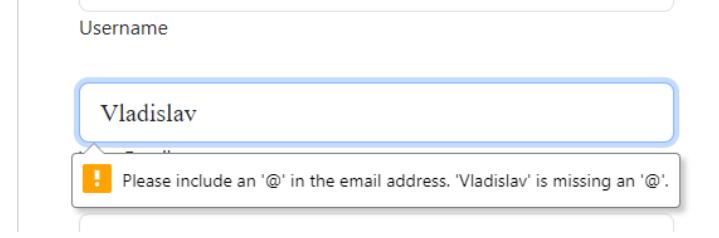

in when the correct credentials are entered		should be changed to username and logout options	 <p>The screenshot shows the RIGET ZOO account dashboard. At the top, it displays "Welcome to your account anastasia1234". Below this are navigation links for "Bookings", "Visits", and "Loyalty Points". A table titled "Your Room Bookings" is shown, containing one row of data:</p> <table border="1"> <thead> <tr> <th>Booking Id</th> <th>Room Id</th> <th>Booked From</th> <th>Booked To</th> <th>Cancel</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>1</td> <td>2024-04-20</td> <td>2024-04-27</td> <td><button>Cancel</button></td> </tr> </tbody> </table>	Booking Id	Room Id	Booked From	Booked To	Cancel	1	1	2024-04-20	2024-04-27	<button>Cancel</button>	
Booking Id	Room Id	Booked From	Booked To	Cancel										
1	1	2024-04-20	2024-04-27	<button>Cancel</button>										
Testing if logout button works	No data needed	The user should be logged out	 <p>The screenshot shows the RIGET ZOO login page. It features a logo, navigation links for "Home", "About Us", "EduVisit", and "Book", and two buttons: "LOGIN" and "SIGN UP".</p>											

<p>Sign up page: White box testing, Black box testing -> Functional testing: Integration testing, Unit testing</p>	<p>No Data needed. Testing if all the buttons are functional, testing sign up unit, testing integration of sign up page within the website</p>	<p>Sign up page should display signup form where user can enter username and password in the bottom of the form there should be an option to get to the login page in case you already have account, when the link is clicked it should lead user to the sign up page</p>

Bootstrap components used throughout the website	Bootstrap	https://getbootstrap.com/docs/5.0/getting-started/introduction/	<p>I used bootstrap elements as it is relatively fast to create the frontend, however the main reason is that bootstrap elements are widely used now and became more intuitive to the end user.</p>

General layout

General layout of the website is fairly close to the designs I have made. The most noticeable change perhaps is the navigation bar. I have decoded to change it closer to the final stages of the development as it seemed more modern and therefore not outdated.

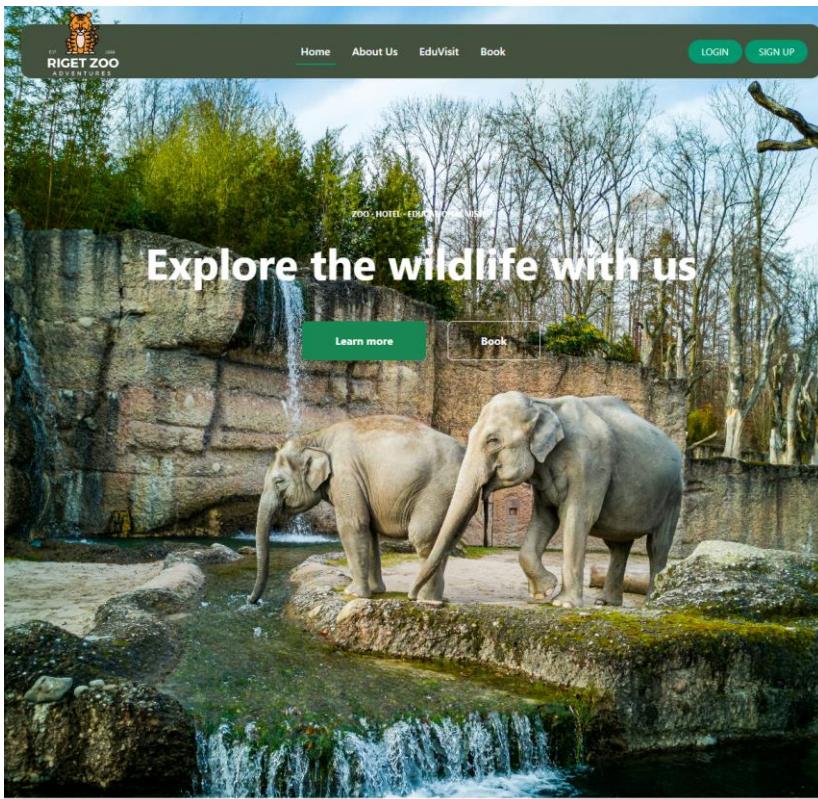

I have kept the colour scheme as in design docs as I wanted it to be WCAG compatible.

Book

Booking main page

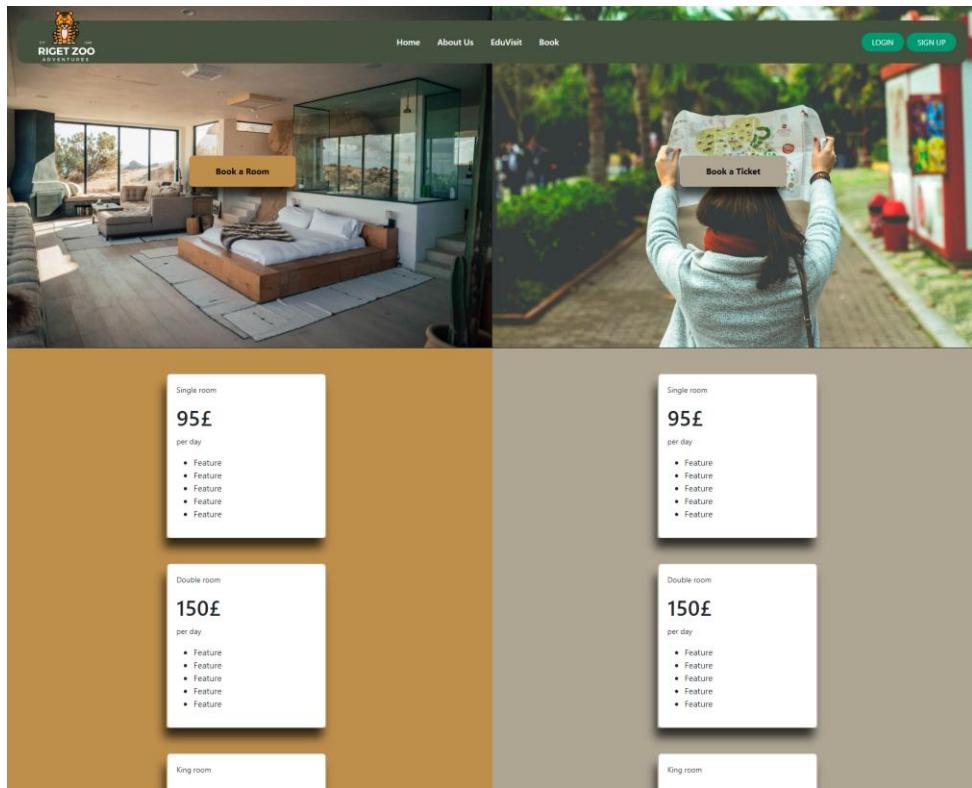

Screenshot of the design

The screenshot shows the booking main page for Riget Zoo Adventures. At the top, there's a dark header with the logo 'RIGET ZOO ADVENTURES' featuring a tiger, and navigation links for 'Home', 'About Us', 'EduVisit', 'Book', and a user icon. A large 'Book a room' button is overlaid on a photo of a modern room with a glass wall. To the right, a photo of a child holding up a ticket is shown with a 'Book a ticket' button. Below these, five room/ticket options are listed in boxes:

- Single room**: £95 per night. Features: Feature, Feature, Feature, Feature.
- Double room**: £150 per night. Features: Feature, Feature, Feature, Feature.
- King room**: £250 per day. Features: Feature, Feature, Feature, Feature.
- Adult ticket**: \$10 per day. Features: Feature, Feature, Feature, Feature.
- Child >13yo ticket**: \$10 per day. Features: Feature, Feature, Feature, Feature.
- Student Ticket**: £8 per day. Features: Feature, Feature, Feature, Feature.

At the bottom, there are links for 'About Us', 'Educational Visits', and 'Book'.

Screenshot of the prototype

Booking Room page

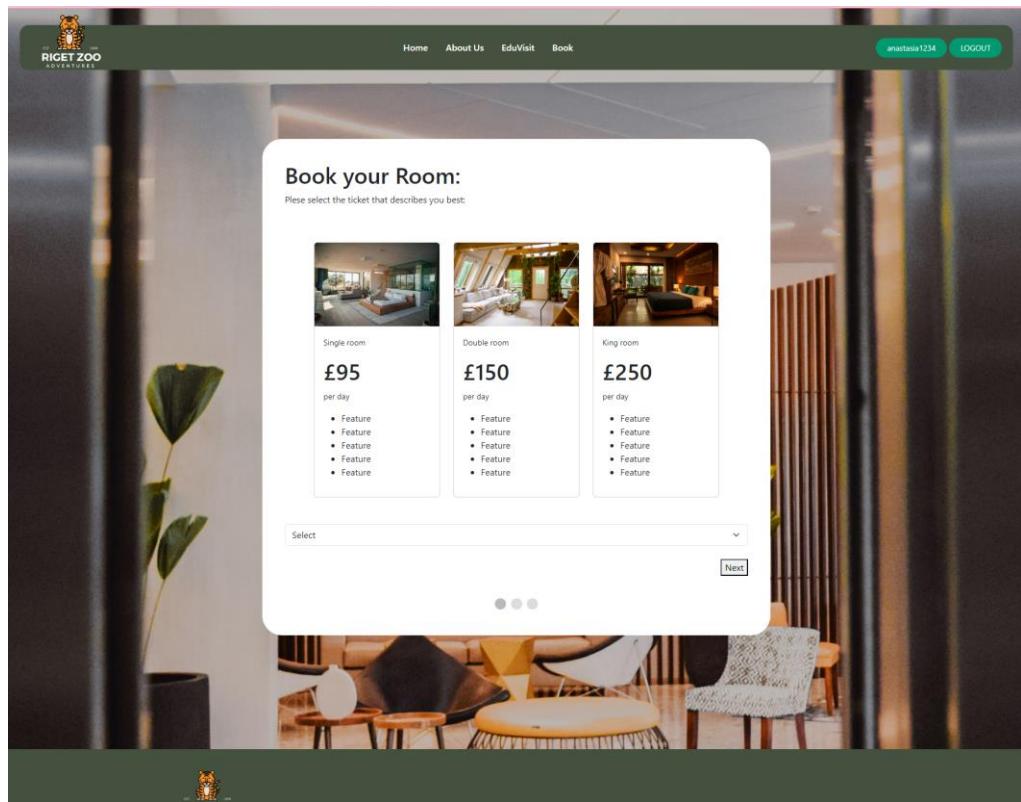

Screenshot of the design

The screenshot shows a booking interface for a room at Riget Zoo Adventures. At the top, there's a navigation bar with links for 'Book a room', 'Home', 'About Us', 'EduVisit', 'Book' (which is highlighted), and a user icon. Below the navigation is a large image of a modern hotel room with a large glass wall overlooking a desert landscape. Underneath the image is a horizontal navigation bar with four items: 'Select a room' (highlighted with a green circle), 'Pick a time', 'Sign In / Sign Up', and 'Get your e-ticket'. The main content area has a heading 'Select a room that suits you best'. Below this are three boxes for room types:

- Single room**: £95 per night. Features: Feature, Feature, Feature, Feature. **Select** button.
- Double room**: £150 per night. Features: Feature, Feature, Feature, Feature. **Select** button.
- King room**: £250 per day. Features: Feature, Feature, Feature, Feature. **Select** button.

A large 'Next' button is centered below these boxes. At the bottom of the page is a footer with the Riget Zoo logo, social media links (Facebook, LinkedIn, YouTube, Instagram), and links for 'About Us', 'Opening schedule', 'Our Animals', 'Educational Visits', 'Materials', 'Advise', 'Book', 'Hotel room', and 'Buy tickets'.

Screenshot of the prototype

The screenshot shows a prototype of a ticket booking interface for a zoo. The background features a photograph of a giraffe standing next to a large, gnarled tree. In the foreground, a white modal window titled "Book your Ticket:" is displayed. The modal contains three ticket options: "Adult Ticket" at 10£ per day, "Child Ticket" at 5£ per day, and "Student Ticket" at 8£ per day. Each ticket option includes a list of five bullet-pointed "Feature" items. Below the ticket options is a dropdown menu labeled "Select" with a "Next" button. At the bottom of the modal are three small circular navigation dots.

Pure technical questions.....	59

Aim of feedback:

To find out how effective the prototype of the proposed solution is and furthermore to be able to find out how well the solution meets requirements of the client. In this feedback I will be creating questionnaire for two different types of users: technical and non-technical. I will include questions that will cover all the specific aspects of the website rather than just generic questions.

Audience	Prototype options	Prototype you will produce	Questions to ask about the prototype	Method of gathering feedback	Who to get feedback from and why
Non-Technical & Technical	There are a lot of options that I considered before choosing how am I going to demonstrate my website to the audience both technical and non-technical. For example, if it was an actual real-life project, gathering the room of colleagues and getting them to test it whilst observing would be quite sensible thing to do. Another thing that could be done is making a presentation with and present it to the chosen audience after which	Because it is not a real-life project. Some of the options are limited. Therefore, it seems to me that there are two reasonable options: sending the link or the video. Because all of my chosen testers are located within same network, I have an opportunity to send the link to show them the	<ul style="list-style-type: none"> - What is your name? - Please rate overall first impression of the website. - Does the website give you a clear understanding of its purpose? - What do you like least/most about website? - How would you describe the website's design? Is it visually appealing? - Is the layout intuitive and easy to navigate? - How easy was it for you to find the website's navigation menu? What are your thoughts on the logo? Do you recon it is easily remembered by the user? Do you believe that the average user will quickly recognize it? 	I have decided to use Microsoft forms in order to gather feedback from both technical and non-technical users, the reason being it has a lot of functionality like attaching videos and photos to the questions, as well as that there are different	For this project all the testers will be my groupmates. However, there are two different groups that I need to gather feedback from: technical and non-technical. That's when sending the forms out I will specify which category I would like the user to choose and then respond to all the questions in that type of manner.

	<p>showing how the prototype works. Then ask them all the questions prepared prior to that. That would make all the colleges more engaged, and the feedback will show the collective opinion. Some important ideas might come out of such a way of working. However, for the small projects or the ones like this one that has an educational purpose and therefore has a few limitations, there are also other ways of showing the prototype. Two of such methods would be creating a walk-through video and sending the link to the website to classmates. However, for the link, it should only be people that are connected to college network, and the</p>	<p>actual website at work. I find it way more interactive than just showing the video.</p> <p>As well as that the downside of the video would be inconvenience in filling the form and having to stop and go back over the video in case you missed something that is asked in the form.</p> <p>To make their experience better, I decided to create a questionnaire in a so that it walks them through the website and helps to discover features.</p>	<ul style="list-style-type: none"> - Please try to hover over navigation links, does the green line appear? What are your thoughts on it? - Please rate the logo and the navigation bar - The colour palette of the website is: <ul style="list-style-type: none"> o User-friendly, makes me want to spend more time on the website. o Is not very pleasant; I would rather change it. - What would you rate the Homepage? - From seeing only homepage, is the purpose of the website clear? - Have you used any buttons to navigate farther through the website, did they work? - What is your overall impression of the about page? - Please rate the about page. - Do you find it useful to have the animals' section in the about page? Did it capture your attention? - Do you find it sensible to have a section with opening times on the about page and EduVisit page? - What do you think about having embedded map on the about page? - Please rate the EduVisit page (Keep in mind that the placeholders will 	<p>ways to ask users such as to rate, to choose a multiple answer question, to write a long answer. And on top of that it enables you to branch, when needed.</p> <p>Since I have decided to do just that after the question of whether the user is tech or non-tech, Microsoft forms are the most reasonable method for me to gather feedback.</p>	
--	---	---	---	---	--

	localhost should be running otherwise the website would not be accessible.	As well as that in some questions that are focusing on one or two particular aspects of the website, I will be adding screenshots. I will also provide technical users with screenshots of some technical aspects to gather more effective and comprehensive feedback.	<p>be filled with useful information for students once the client provides data and prototype goes into development.</p> <ul style="list-style-type: none"> - Please rate the visual appearance of the main booking page. - Please try to book a ticket of your preference, you will find that to book a ticket you need to login first? How quickly did you find the sign up link, to create account before logging in? - Have you seen helpful message : "You need to login first to book a room"? Did you find it easy to create an account and login? - Now that you have successfully logged in do you notice the changes on the navigation bar? Do you find your experience more personalised, having this feature? - Please rate the sign up/login system (Make sure to checkout validation) - Once you are logged in the website takes you automatically to the user page, however because you have yet not booked any tickets or rooms there is an error message that will be fixed in the further development. Feel free to navigate 	There is going to be one form for both technical and non-technical users however at the point of the question about technical skills level the questionnaire will be branched. This will be done to gather as much feedback as possible, as in this way technical users will answer both technical and non-technical questions.	
--	--	--	--	---	--

			<p>back to the booking page and try to book a room now.</p> <ul style="list-style-type: none"> - Have did you find the booking form? What did you like and what did you not like? - Now that you have booked a room and a ticket, can you see your bookings on the user page? - Please choose what is your prior technical skills level - Please look at the database. In your opinion is this table structured in the most efficient way? If not, what changes would you make to improve it? - Please look at the naming conventions and the folder structure. Is it somewhat clear? How easy would that be to continue working on the project in case of reassigning it to you? 		
--	--	--	--	--	--

Feedback Summary

Synopsis of who was asked for feedback

For this questionnaire, I have carefully chosen the audience for the feedback. I have asked 11 people to complete the form the form is the same and the only difference for technical users will be in the end of the form therefore, all 11 testers have completed the non – technical form and 8 completed technical form.

Please see the table below to see the criteria that I was choosing based on, I have only included initials to not disclose personal information of the testers.

	ER – male, has younger sibling is a frequent zoo customer.
	FO – male, has prior experience working for the zoo.
	AN – female, has younger siblings, and very recently had experience booking tickets for Chester Zoo.
	DW – male, advanced technical skills, prior knowledge of the sql databases and php
	SC – male, advanced frontend knowledge and UI/UX design
	CB – male, has prior experience in creating full stack solution.
	BW – male, advanced database knowledge,
	VT – female, is an average user that could potentially become a client of the zoo, she did not have prior experience booking online, therefore will give feedback that will give some insights for this time of audience.
	RO – male, has prior experience in UI/UX design.
	MV – female, has prior experience in UI/UX design and frontend development.
	SS – male, has prior experience in full stack development.

Synopsis of who responded and provided feedback

Everyone that has received the form had responded to the questionnaire. All together 11 answers.

Results of feedback (results, charts, graphs, scales etc)

1 Please enter your name

[REDACTED]

2 Please rate overall first impression of the website.

1 2 3 4 5 6 7 8 9 10

3 Does the website give you a clear understanding of its purpose?

Yes
 No

4 What do you like least/most about website?

It can be a little more welcoming with some CSS or display options but nonetheless it isn't horrible.

5 How would you describe the website's design? Is it visually appealing?

I think it can be better but overall there are no issues with it.

6 Is the layout intuitive and easy to navigate?

Yes
 No
 Maybe

7 How easy was it for you to find the website's navigation menu? What are your thoughts on the logo? Do you recon it is easily remembered by the user? Do you believe that the average user will quickly recognize it?

The color was distinctively different and it looks great and is easy to navigate and locate so overall it was easy and i had no issues.

8 Please try to hover over navigation links, does the green line appear? What are your thoughts on it?

It is very interactive, a good feature to have
 I did not like it, it's distracting

9 Please rate the logo and the navigation bar

1 2 3 4 5 6 7 8 9 10

10

The colour palette of the website is:

- User-friendly, goes well with RZA adventures
- Is not very pleasant, I would rather change it

11

What would you rate the Homepage?

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

12

From seeing only homepage, is the purpose of the website clear?

- Yes
- No

13

Have you used any buttons to navigate farther through the website, did they work?

- Yes, Yes
- Yes, No
- No, No

14

Please rate the about page

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

15

Do you find it useful to have the animals section in the about page? Did it capture your attention?

It captured my attention with the visual images and the details were very informative, overall great about me page

16

Do you find it sensible to have a section with opening times on the about page and EduVisit page?

Yes it helps a lot with navigation and makes things simple and effective.

17

What do you think about having embedded map on the about page?

- It's useful, I like it better than simple text
- I would not use it, I would prefer textual location

18

Please rate the EduVisit page (Keep in mind that the placeholders will be filled with useful information for students once the client provides data and prototype goes into development)

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

19

Please rate the visual appearance of the main booking page

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

20

Please try to book a ticket of your preference, you will find that to book a ticket you need to login first? How quickly did you find the sign up link, to create account before logging in?

I simply clicked on the sign up page beforehand so when it redirected me I was surprised that it worked.

21

Have you seen helpful message : "You need to login first to book a room"? Did you find it easy to create an account and login?

- Yes, Yes
- Yes, No
- No, Yes
- No, No

22

Now that you have successfully logged in do you notice the changes on the navigation bar? Do you find your experience more personalized, having this feature?

- Yes
- No

23

Please rate the sign up/login system (Make sure to checkout validation)

1 2 3 4 5 6 7 8 9 10

24

Once you are logged in, the website takes you automatically to the user page, however because you have yet not booked any tickets or rooms there is an error message that will be fixed in the further development. Feel free to navigate back to the booking page and try to book a room now. !(No response needed)

24

Once you are logged in, the website takes you automatically to the user page, however because you have yet not booked any tickets or rooms there is an error message that will be fixed in the further development. Feel free to navigate back to the booking page and try to book a room now. !(No response needed)

25

Have did you find the booking form? What did you like and what did you not like?

clear and concise but maybe adding some more information and visual images would be nice.

26

Now that you have booked a room and a ticket, can you see your bookings on the user page?

- Yes
- No

27

Please choose what is your prior technical skills level

- Technical user
- Non technical user

1

Please enter your name

2

Please rate overall first impression of the website.

1 2 3 4 5 6 7 8 9 10

3

Does the website give you a clear understanding of its purpose?

Yes

No

4

What do you like least/most about website?

The thing i did not like about the site was the footer structure, as most images and icons were not centered and structured well. What i did like was the color design as it looked very appealing and was consistent throughout the site

5

How would you describe the website's design? Is it visually appealing?

Yes it was easy to read and navigate

6

Is the layout intuitive and easy to navigate?

Yes

7

How easy was it for you to find the website's navigation menu? What are your thoughts on the logo? Do you think it is easily remembered by the user? Do you believe that the average user will quickly recognize it?

Yes i believe it would be easy for a new user to navigate through the site without getting lost. The logo is very appealing and it stands out very well and easy to identify that it would be a zoo website

8

Please try to hover over navigation links, does the green line appear? What are your thoughts on it?

It is very interactive, a good feature to have

I did not like it, it's distracting

9

Please rate the logo and the navigation bar

1 2 3 4 5 6 7 8 9 10

10

The colour palette of the website is:

- User-friendly, goes well with RZA adventures

Yes they are structured in an efficient way

29

Please look at the naming conventions and the folder structure. Is it somewhat clear? How easy would that be to continue working on the project in case of reassigning it to you?

It looks very clear as a technical user and like how it separated in different folder

1 2 3 4 5 6 7 8 9 10

3 Does the website give you a clear understanding of its purpose?
 Yes
 No

4 What do you like least/most about website?
I'm unable to cancel a booking once I've booked, so maybe this could be something to improve in the future to give a better user experience

5 How would you describe the website's design? Is it visually appealing?
Yes it is as the colours and background go well together

6 Is the layout intuitive and easy to navigate?

- Yes
 No
 Maybe

7 How easy was it for you to find the website's navigation menu? What are your thoughts on the logo? Do you recon it is easily remembered by the user? Do you believe that the average user will quickly recognize it?

Very nice and unique nav bar

8 Please try to hover over navigation links, does the green line appear? What are your thoughts on it?
 It is very interactive, a good feature to have
 I did not like it, it's distracting

9 Please rate the logo and the navigation bar

1 2 3 4 5 6 7 8 9 10

10

- User-friendly, goes well with RZA adventures
 Is not very pleasant, I would rather change it

11

What would you rate the Homepage?

1 2 3 4 5 6 7 8 9 10

12

From seeing only homepage, is the purpose of the website clear?

- Yes
 No

13

Have you used any buttons to navigate farther through the website, did they work?

- Yes, Yes
 Yes, No
 No, No

14

Please rate the about page

1 2 3 4 5 6 7 8 9 10

15

Do you find it useful to have the animals section in the about page? Did it capture your attention?

15

Do you find it useful to have the animals section in the about page? Did it capture your attention?

16

Do you find it sensible to have a section with opening times on the about page and EduVisit page?

Yes as you're giving users information and answers to their questions that if it wasn't there the business may have received calls from customers who just want to know the opening times

17

What do you think about having embedded map on the about page?

- It's useful, I like it better than simple text
 I would not use it, I would prefer textual location

18

Please rate the EduVisit page (Keep in mind that the placeholders will be filled with useful information for students once the client provides data and prototype goes into development)

1 2 3 4 5 6 7 8 9 10

19

Please rate the visual appearance of the main booking page

1 2 3 4 5 6 7 8 9 10

20

Please try to book a ticket of your preference, you will find that to book a ticket you need to login first? How quickly did you find the sign up link, to create account before logging in?

Signup process was quite easy to, but if you were to develop the signup page even further I would include some sort of validation that would automatically go to the next field required, for example when I type in a username and press enter it displays me an error message instead of this allow the system to go onto the next field automatically

21

Have you seen helpful message : "You need to login first to book a room"? Did you find it easy to create an account and login?

- Yes, Yes
- Yes, No
- No, Yes
- No, No

22

Now that you have successfully logged in do you notice the changes on the navigation bar? Do you find your experience more personalized, having this feature?

- Yes
- No

23

Please rate the sign up/login system (Make sure to checkout validation)

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

24

Once you are logged in, the website takes you automatically to the user page, however because you have yet not booked any tickets or rooms there is an error message that will be fixed in the further development. Feel free to navigate back to the booking page and try to book a room now. !(No response needed)

25

Have did you find the booking form? What did you like and what did you not like?

No

23

Please rate the sign up/login system (Make sure to checkout validation)

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

24

Once you are logged in, the website takes you automatically to the user page, however because you have yet not booked any tickets or rooms there is an error message that will be fixed in the further development. Feel free to navigate back to the booking page and try to book a room now. !(No response needed)

25

Have did you find the booking form? What did you like and what did you not like?

The booking is nicely laid out I'd say, but maybe if you could have written some more information in the price boxes to give a better insight into what's included in each ticket or room selection it would make their selection more easy

26

Now that you have booked a room and a ticket, can you see your bookings on the user page?

Yes

No

3
Does the website give you a clear understanding of its purpose?

Yes
 No

4
What do you like least/most about website?

Like the simplicity of the website but some of the pages might contain too much detail.

5
How would you describe the website's design? Is it visually appealing?

It is alright

6
Is the layout intuitive and easy to navigate?

Yes

7
How easy was it for you to find the website's navigation menu? What are your thoughts on the logo? Do you recon it is easily remembered by the user? Do you believe that the average user will quickly recognize it?

It is easy to find the menu. The logo is clear but slightly generic. I'd say that average user will quickly recognize it.

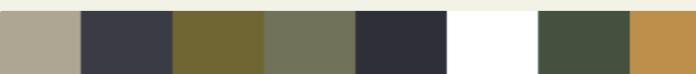

8
Please try to hover over navigation links, does the green line appear? What are your thoughts on it?

It is very interactive, a good feature to have
 I did not like it, it's distracting

9

3
Does the website give you a clear understanding of its purpose?

 Yes
 No

4
What do you like least/most about website?

I like how wide it feels. You made good use of the available space and the site looks and feels professional.

5
How would you describe the website's design? Is it visually appealing?

I think it is appealing, though some elements seem oddly centered (much like my website). I like your use of many images in the site, and the navigation bar not filling up the entire top of the screen is a nice touch. It seems like some of the

I think it is appealing, though some elements seem oddly centered (much like my website). I like your use of many images in the site, and the navigation bar not filling up the entire top of the screen is a nice touch. It seems like some of the images, such as 2 of the ones in the facilities tab, were smaller than the rest though, which makes that section feel less uniform.

6
Is the layout intuitive and easy to navigate?

 Yes
 No
 Maybe

7
How easy was it for you to find the website's navigation menu? What are your thoughts on the logo? Do you recon it is easily remembered by the user? Do you believe that the average user will quickly recognize it?

The navigation menu stands out and is easy to navigate. I really like the logo as well, feels like a zoo that has been around for a long time. I do think it's a bit too detailed to only be visible on the navbar. Maybe you should have placed the logo on the homepage as well, so that users can have a closer look at it and better remember it.

8
Please try to hover over navigation links, does the green line appear? What are your thoughts on it?

 It is very interactive, a good feature to have
 I did not like it, it's distracting

1 2 3 4 5 6 7 8 9 10

15

Do you find it useful to have the animals section in the about page? Did it capture your attention?

I think it is useful to have the animals here, as they are the most important part of a zoo so people will want to learn about them first.

16

Do you find it sensible to have a section with opening times on the about page and EduVisit page?

Yes I do, but I also think it would have been useful on the homepage. It's crucial information that a user will want to know quickly, and it would help to make the homepage a bit larger.

17

What do you think about having embedded map on the about page?

- It's useful, I like it better than simple text
 I would not use it, I would prefer textual location

Booking a room seemed to work, yes. There are some errors with the login/signup areas I want to address though: First, when I enter an incorrect password in the login menu, I'm taken to the signup menu instead of being told my password is incorrect. Second, there's no minimum length for passwords. I can have a password of 'a' and it's accepted.

25

I think the naming conventions are reasonable, but I'm not quite sure what the difference between tickets and ticket_bookings is

29

Please look at the naming conventions and the folder structure. Is it somewhat clear? How easy would that be to continue working on the project in case of reassigning it to you?

I'm not familiar with the naming conventions you used in that folder structure, but I can clearly see each file's function in their name.

Yes they are reasonable and easy to understand for anyone else looking at the database

29

Please look at the naming conventions and the folder structure. Is it somewhat clear? How easy would that be to continue working on the project in case of reassigning it to you?

As they are separated into folders it makes it a lot easier to find what you need.

1

Please enter your name

2

Please rate overall first impression of the website.

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

3

Does the website give you a clear understanding of its purpose?

- Yes
 No

4

What do you like least/most about website?

I like the functional booking system for both the hotel and tickets and that you can view each booking

5

How would you describe the website's design? Is it visually appealing?

Yes, the colour scheme fits in with the theme of the website and it is consistent throughout the website

6

Is the layout intuitive and easy to navigate?

- Yes

7

How easy was it for you to find the website's navigation menu? What are your thoughts on the logo? Do you recon it is easily remembered by the user? Do you believe that the average user will quickly recognize it?

The navigation bar is clear at the top of the page and the logo is easily memorable with the tiger icon on it.

8

Please try to hover over navigation links, does the green line appear? What are your thoughts on it?

- It is very interactive, a good feature to have
 I did not like it, it's distracting

9

Please rate the logo and the navigation bar

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

10

The colour palette of the website is:

- User-friendly, goes well with RZA adventures
 Is not very pleasant, I would rather change it

11

What would you rate the Homepage?

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

12

From seeing only homepage, is the purpose of the website clear?

Yes

No

13

Have you used any buttons to navigate farther through the website, did they work?

Yes, Yes

Yes, No

No, No

14

Please rate the about page

1 2 3 4 5 6 7 8 9 10

15

Do you find it useful to have the animals section in the about page? Did it capture your attention?

Yes, it allows the user to view information about the animals in the zoo

16

Do you find it sensible to have a section with opening times on the about page and EduVisit page?

Yes it allows the user to view the businesses operating hours so they can arrive at the correct time

17

What do you think about having embedded map on the about page?

What do you think about having embedded map on the about page?

It's useful, I like it better than simple text

I would not use it, I would prefer textual location

18

Please rate the EduVisit page (Keep in mind that the placeholders will be filled with useful information for students once the client provides data and prototype goes into development)

1 2 3 4 5 6 7 8 9 10

19

Please rate the visual appearance of the main booking page

1 2 3 4 5 6 7 8 9 10

20

Please try to book a ticket of your preference, you will find that to book a ticket you need to login first? How quickly did you find the sign up link, to create account before logging in?

Very clear as it is common for it to be in the position it is in. Normally the first place a user looks

21

Have you seen helpful message : "You need to login first to book a room"? Did you find it easy to create an account and login?

Yes, Yes

Yes, No

No, Yes

No, No

22

Now that you have successfully logged in do you notice the changes on the navigation bar? Do you find your experience more personalized, having this feature?

- Yes
 No

23

Please rate the sign up/login system (Make sure to checkout validation)

1 2 3 4 5 6 7 8 9 10

24

Once you are logged in, the website takes you automatically to the user page, however because you have yet not booked any tickets or rooms there is an error message that will be fixed in the further development. Feel free to navigate back to the booking page and try to book a room now. !(No response needed)

25

Have did you find the booking form? What did you like and what did you not like?

I liked the fact that it was in different stages and there was a little progress bar at the bottom to view how many stages there are

26

Now that you have booked a room and a ticket, can you see your bookings on the user page?

- Yes
 No

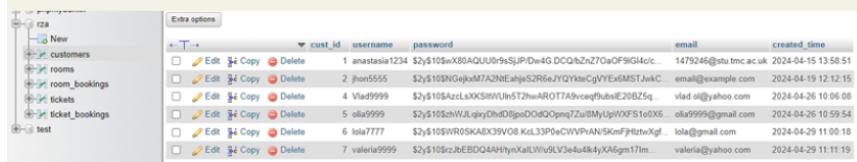

27

Please choose what is your prior technical skills level

- Technical user
 Non technical user

28

Please look at the database. In your opinion are the naming conventions for the tables reasonable? Is the customers table structured in the most efficient way? If not, what changes would you make to improve it?

it's structured in a very efficient way, I do think that the bookings tables in terms of naming could've been abbreviated.

29

Please look at the naming conventions and the folder structure. Is it somewhat clear? How easy would that be to continue working on the project in case of reassigning it to you?

the naming conventions are very clear and they would help any other developer once they're working on it

What do you like least/most about website?
I mostly like that all of the buttons, navbar links and functionality seem to work so far
5

I mostly like that all of the buttons, navbar links and functionality seem to work so far

5
How would you describe the website's design? Is it visually appealing?

It is simple enough so that user does not get overwhelmed with a lot of information and features on the pages yet lovely as it looks visually appealing and does not look cheap and boring

6
Is the layout intuitive and easy to navigate?

- Yes
 No
 Maybe

7
How easy was it for you to find the website's navigation menu? What are your thoughts on the logo? Do you recon it is easily remembered by the user? Do you believe that the average user will quickly recognize it?

It was very easy and the logo looks good and memorable so it will most likely be remembered and recognised by the user

8
Please try to hover over navigation links, does the green line appear? What are your thoughts on it?
 It is very interactive, a good feature to have
 I did not like it, it's distracting

8

15

Do you find it useful to have the animals section in the about page? Did it capture your attention?

I think it's useful to have it as it tells the user what animals are available and what to expect and it definitely captured my attention

16

Do you find it sensible to have a section with opening times on the about page and EduVisit page?

I think it's sensible as the user might forget the opening times when they get to one of these pages so it will be convenient for them to see it on that page rather than go back to the other page to see it however you should probably make the positions of the opening times more consistent for example make sure it is on the top or middle of the page on both pages

17

What do you think about having embedded map on the about page?

- It's useful, I like it better than simple text
- I would not use it, I would prefer textual location

Please look at the database. In your opinion are the naming conventions for the tables reasonable? Is the customers table structured in the most efficient way? If not, what changes would you make to improve it?

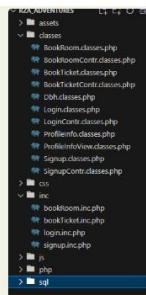

The screenshot shows a MySQL database interface with the 'customers' table selected. The table has columns: cost_id, username, password, email, and created_time. There are 7 rows of data, each with unique values for cost_id and email, and various random strings for the other columns.

The naming conventions seem reasonable and the customers table is structured in a efficient way

29

Please look at the naming conventions and the folder structure. Is it somewhat clear? How easy would that be to continue working on the project in case of reassigning it to you?

It's quite clear but the naming could be a little better like have a '_' in between each word to make it easier to read the file names and it seems like it would be easy to find files if it was reassigned to me but in terms of the easiness of continuing to work on it I need to see the code in order to determine that

3 Does the website give you a clear understanding of its purpose?
 Yes
 No

4 What do you like least/most about website?
The design is very sleek and professional as well as being intuitive to navigate

5 How would you describe the website's design? Is it visually appealing?
Intuitive

Yes

No

Maybe

7

How easy was it for you to find the website's navigation menu? What are your thoughts on the logo? Do you recon it is easily remembered by the user? Do you believe that the average user will quickly recognize it?

The navigation works as expected and the logo is memorable and easy to understand/recognize

8

Please try to hover over navigation links, does the green line appear? What are your thoughts on it?

It is very interactive, a good feature to have

I did not like it, it's distracting

9

Please rate the logo and the navigation bar

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

10

The colour palette of the website is:

User-friendly, goes well with RZA adventures

Is not very pleasant, I would rather change it

11

What would you rate the Homepage?

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

12

From seeing only homepage, is the purpose of the website clear?

Yes

No

13

Have you used any buttons to navigate farther through the website, did they work?

Yes, Yes

Yes, No

No, No

14

Please rate the about page

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

15

Do you find it useful to have the animals section in the about page? Did it capture your attention?

Yes it is useful as it provides insight to the safari park

What do you think about having embedded map on the about page?

- It's useful, I like it better than simple text
- I would not use it, I would prefer textual location

18

Please rate the EduVisit page (Keep in mind that the placeholders will be filled with useful information for students once the client provides data and prototype goes into development)

1 2 3 4 **5** 6 7 8 9 10

19

Please rate the visual appearance of the main booking page

1 2 3 4 5 6 7 8 9 **10**

20

Please try to book a ticket of your preference, you will find that to book a ticket you need to login first? How quickly did you find the sign up link, to create account before logging in?

21

Have you seen helpful message : "You need to login first to book a room"? Did you find it easy to create an account and login?

- Yes, Yes
- Yes, No
- No, Yes
- No, No

22

22

Now that you have successfully logged in do you notice the changes on the navigation bar? Do you find your experience more personalized, having this feature?

- Yes
- No

23

Please rate the sign up/login system (Make sure to checkout validation)

1 2 3 4 5 6 7 8 9 **10**

24

Once you are logged in, the website takes you automatically to the user page, however because you have yet not booked any tickets or rooms there is an error message that will be fixed in the further development. Feel free to navigate back to the booking page and try to book a room now. !(No response needed)

25

Have did you find the booking form? What did you like and what did you not like?

The booking process is intuitive and functional. Once criticism would be that bookings cannot be canceled

26

Now that you have booked a room and a ticket, can you see your bookings on the user page?

- Yes
- No

27

Please choose what is your prior technical skills level

Technical user

Non technical user

28

Please look at the database. In your opinion are the naming conventions for the tables reasonable? Is the customers table structured in the most efficient way? If not, what changes would you make to improve it?

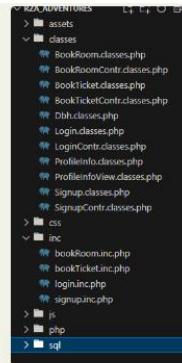

The screenshot shows a MySQL database interface with a tree view on the left containing 'rza', 'rza', 'New', 'customers', 'rooms', 'room_bookings', 'tickets', 'ticket_bookings', and 'test'. On the right, there is a table titled 'customers' with the following data:

	cost_id	username	password	email	created_time
<input type="checkbox"/>	1	anastasia1234	\$2y\$10\$wX00AQUU0r9SjPjDw4G.DCQzbZn70aOF9lG4oc...	1479246@stu.tmc.ac.uk	2024-04-15 13:58:51

The naming conventions are appropriate and security was considered via password hashing

29

Please look at the naming conventions and the folder structure. Is it somewhat clear? How easy would that be to continue working on the project in case of reassigning it to you?

The folder structure is clear to understand as files are segmented according to their respective languages.

Summary of feedback in detail

Overall impression:

The result of rating the first impression is 8.45 out of 10 based on 11 responses, where the highest is 10 and the lowest is 7. Personally, I agree with the result as I see how the frontend could be developed farther. On the question, if the website gives a clear understanding of its purpose, all 11 people that completed the form has responded with a yes, which I see as a success, because it will keep the right audience on the website and lower the bounce rate. For the question most/least liked about the website, there are different answers, however almost all the testers seem to like that the website has a lot of functionality that works, the technical users were mentioning the login system, colour and consistency on the website. One of the testers underlined: *I like how wide it feels. You made good use of the available space and the site looks and feels professional.*

For the dislike part some of the user mentioned the footer structure. Which I fully agree with, as I have not spent too much time on the development of the footer, I rather concentrated on the functionality and backend, which took most of the time of the prototype development. And I think I should have added a message “still under development” to show testers that it is going to be farther developed. Similarly, to this, one tester has mentioned: *I'm unable to cancel a booking once I've booked, so maybe this could be something to improve in the future to give a better user experience.* For the feature of managing your bookings I have only done the frontend and therefore it did not function. However, what I could have done is display a message that says this feature is currently being developed, so users know that they're booking was not cancelled and why.

Navigation:

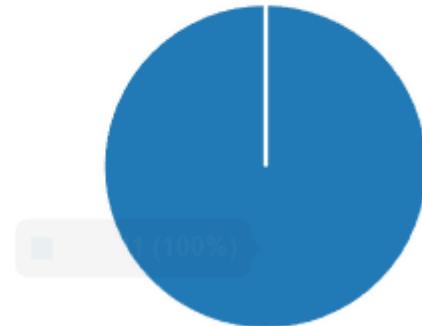

In the questionnaire I have asked the testers to see if the layout is intuitive and easy to navigate to which all the testers answered positively.

To support this, here is a pie chart formed from the answers:

6. Is the layout intuitive and easy to navigate?

[More Details](#)  [Insights](#)

 Yes	11
 No	0
 Maybe	0

The other question that I asked was:

How easy was it for you to find the website's navigation menu? What are your thoughts on the logo? Do you recon it is easily remembered by the user? Do you believe that the average user will quickly recognize it?

I have asked these questions to understand if the website will help my client RZA adventures to make strong connections with its customers. I was very much satisfied with the responses that I received. For ex.

The color was distinctively different and it looks great and is easy to navigate and locate so overall it was easy and i had no issues.

Yes i believe it would be easy for a new user to navigate through the site without getting lost. The logo is very appealing and it stands out very well and easy to identify that it would be a zoo website

I think it has a unique look and the logo is good and easily recognizable.

It was very easy and the logo looks good and memorable so it will most likely be remembered and recognised by the user

On the navigation bar I have added a hover effect feature and therefore I wanted to know how would potential end users like it. The question I asked:
Please try to hover over navigation links, does the green line appear? What are your thoughts on it?

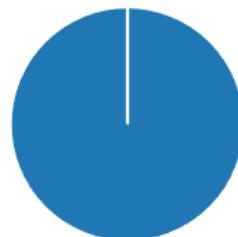

I had very positive feedback, meaning that this is a feature that we need to keep on the website:

8. Please try to hover over navigation links, does the green line appear? What are your thoughts on it?

Homepage:

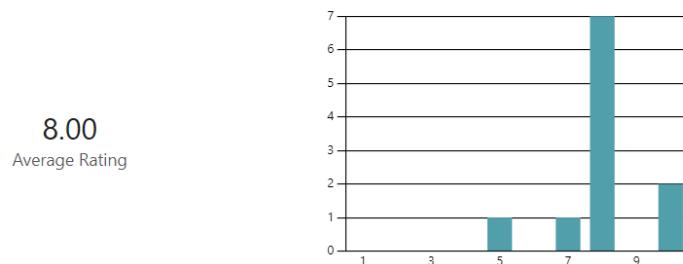

I consider colour palette to be very important when designing and developing the website. As a lot of users out there judge the website by its appearance which is quite sensible, consistent colour palette throughout the website might keep user more engaged, as well as give the feeling of the “save space”. Therefore, I have asked the following question:

10. The colour palette of the website is:

11. What would you rate the Homepage?

More Details Insights

The most important thing about homepage is to capture users' attention and to give a clear understanding of the website, so the user follows to the other pages and potentially becomes a paying customer. Therefore, I have asked the following question:

12. From seeing only homepage, is the purpose of the website clear?

[More Details](#)

 Insights

- Yes
- No

9

About Page

I have asked testers to rate the about page. The average rating was 7.0 out of 10. Which I find sensible, now that I see that in further development, I could add more information about the RZA.

One section of the about page contains animals that customers will find when they visit zoo. Therefore, I wanted to know if that is something that end user would be interested seeing on the about page. My question: *Do you find it useful to have the animals section in the about page? Did it capture your attention?*

Some of the answers:

It captured my attention with the visual images and the details were very informative, overall great about me page

I think it is useful to have the animals here, as they are the most important part of a zoo so people will want to learn about them first.

yes, it was clearly a great way to catch the user's attention and to let the user stay a longer time on the website, and be more intrigued about what is in the zoo.

I think it's useful to have it as it tells the user what animals are available and what to expect and it definitely captured my attention

From this feedback I can take that this section is very useful and should be kept on the website, Because of such a great review I think in further development this section should be paid a lot of attention.

The other section that I have included on the about page is opening times, therefore I wanted to get testers' opinion on that:

Do you find it sensible to have a section with opening times on the about page and EduVisit page?

I think it's sensible as the user might forget the opening times when they get to one of these pages so it will be convenient for them to see it on that page rather than go back to the other page to see it however you should probably make the positions of the opening times more consistent for example make sure it is on the top or middle of the page on both pages

Yes it allows the user to view the businesses operating hours so they can arrive at the correct time

Yes as you're giving users information and answers to their questions that if it wasn't there the business may have received calls from customers who just want to know the opening times

From these responses, I can conclude that the opening times is a very important section to have.

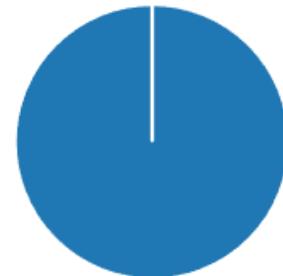

Finally, I have asked about the embedded map as a location guide and according to the feedback testers find it very much useful:

17. What do you think about having embedded map on the about page?

Main booking page, booking system & signup/login system.

The main booking page consists of two sections divided vertically: book a room and book a ticket. Once you press the button the system automatically checks if the user is signed in or not, if not, refers the end user to the login page first with a message. When user is logged in then he/she can proceed with booking which consists of 3 stages: choosing type of ticket or room, choosing the date and confirmation.

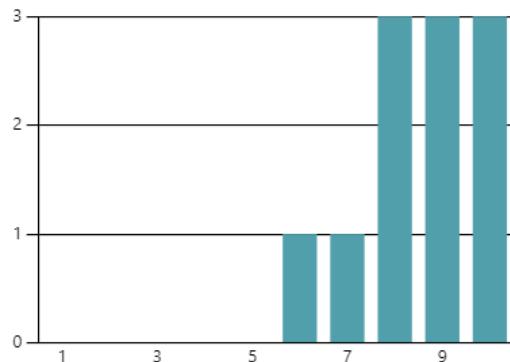

First thing I have decided to ask about this page is if it is appealing at first place:

. Please rate the visual appearance of the main booking page

[More Details](#)

 Insights

8.55
Average Rating

The result 8.55 out of 10 based on 11 people asked is very reasonable.

Since all the testers see the website first time, I've assumed that they will not be logged in or signed up, thus a great chance to test how the booking handles this scenario first. Because the booking refers users to login page and not sign up, it is crucial that users can almost instantaneously and very intuitively find the link to sign up, therefore I have asked the following question:

Please try to book a ticket of your preference, you will find that to book a ticket you need to login first? How quickly did you find the sign up link, to create account before logging in?

Some answers:

i was able to do the process very quickly and get what I wanted to do done

Very clear as it is common for it to be in the position it is in. Normally the first place a user looks

I found it fast as it is in the most common place which is good for users as they wont have to search for the sign up page.

I knew where to look for it, so I found it quite quickly

Signup process was quite easy to, but if you were to develop the signup page even further I would include some sort of validation that would automatically go to the next field required, for example when I type in a username and press enter it displays me an error message instead of this allow the system to go onto the next field automatically

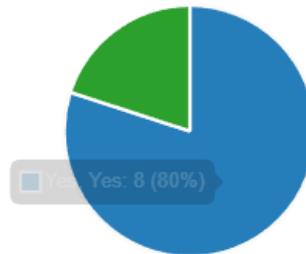

Most of the feedback was extremely positive, which I find satisfying, the very last comment I have added above had a suggestion for further development, which is a very useful piece of feedback. The validation that I have added was a backend validation that will not allow for erroneous data to the database and therefore extremely secure, while using simple html-based validation might lead to the issues. One example would be, someone could change html in browser's development tools and that would then pass and data in or no data in. However, after reading this feedback, I have realised that in actuality the combination of both validations would be the most appropriate way to go about it.

The next question was:

21. Have you seen helpful message : "You need to login first to book a room"? Did you find it easy to create an account and login?

[More Details](#)

●	Yes, Yes	8
●	Yes, No	0
●	No, Yes	2
●	No, No	0

In order to make it a more smooth-sailing experience for users, I decided to add a message if users is redirected to the login page through the booking system. Most of the responses show that this function works, and it's easily spotted, however because there were two people that have not noticed this message, it might be sensible in the future development to Change the colour of it or make it an alert type of message.

The following question was:

22. Now that you have successfully logged in do you notice the changes on the navigation bar? Do you find your experience more personalized, having this feature?

[More Details](#)

Insights

●	Yes	8
●	No	1

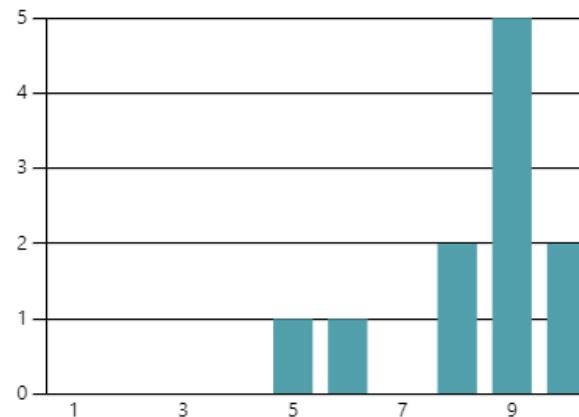

Most responses were positive, but one. It's quite hard to argue one's opinion on their experience. However, I find it, that we are safe to rely on the majority.

3. Please rate the sign up/login system (Make sure to checkout validation)

[More Details](#)

 Insights

8.36
Average Rating

My next question after testers already had experience with booking was:

Have did you find the booking form? What did you like and what did you not like?

Some answers:

clear and concise but maybe adding some more information and visual images would be nice.

The booking is nicely laid out I'd say, but maybe if you could have written some more information in the price boxes to give a better insight into what's included in each ticket or room selection it would make their selection more easy.

The booking form was easy to understand and showed up once you had booked a ticket on the bookings page.

I liked the fact that it was in different stages and there was a little progress bar at the bottom to view how many stages there are

very easy to navigate in, user friendly and i liked it

It is easy to use but I cannot book for multiple tickets at once.

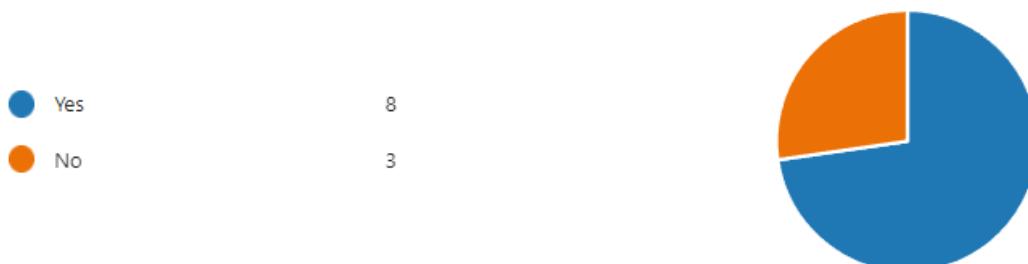

I liked that it was easy to use but I didn't like the fact the you can't book both child and adult and that you cant type how many children and/or adults are coming

All the comments had some positives to say which is really good, however what I really want to focus on here is negatives as that is exactly what drives further development. One of the testers included that some more images and content might be nice the other one said that some more information in price boxes will help the in the selection process. I completely agree with those comments, I have made a pretty generic placeholders that will satisfy the overall design and the website theme. However, when it comes to the actual deployment all the data and appropriate images provided by the client will be integrated instead. Thus, I think this issue will be exhausted by the time the software goes live. The other two comments were on the other hand more serious saying that in the form it does not ask you how many children or adults the tickets are booked for, meaning that the users will need to book all the tickets separately, which might influence their overall experience on the website, depending how many separate tickets they need to book. Therefore, this issue should be addressed first thing in the further development. On the positive side, it is fairly easy to integrate, by adding one more field to the booking form and one to column to the table on the database + validation. On average it should not take more than 1.5 hours to implement.

Another feature that I have added was that when the user has any tickets booked or rooms reserved, they will be shown in the user page, thus the following question:

5. Now that you have booked a room and a ticket, can you see your bookings on the user page?

[More Details](#)  Insights

While creating this form I have encountered a bug in the system: once you sign up for the first time and you don't yet have booking data on the database the system does not handle it gracefully instead shows error messages inside the user page and therefore few questions earlier I explained that to my testers :

24. Once you are logged in, the website takes you automatically to the user page, however because you have yet not booked any tickets or rooms there is an error message that will be fixed in the further development. Feel free to navigate back to the booking page and try to book a room now. !(No response needed)

However, once the bookings are made, the system displays them, and I have tested it multiple times. As well as that 8 responses show that the bookings are displayed. Therefore, I think before deployment it should be something to investigate, however it should be working properly.

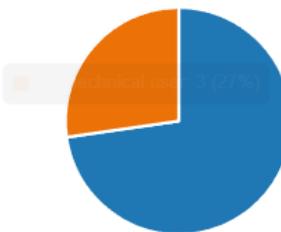

Pure technical questions

I structured my form in the way that all the testers must answer first and biggest chunk of non-technical questions, and then I separate them by asking the question:

27. Please choose what is your prior technical skills level

[More Details](#) 

 Technical user	8
 Non technical user	3

In this way, Technical users could answer both technical and non-technical questions.

In terms of technical questions, I found it the most important to ask the opinion on the naming convention and the clarity of the database structure, since this is important in case this project should be further developed by another programmers.

My question:

Please look at the database. In your opinion are the naming conventions for the tables reasonable? Is the customers table structured in the most efficient way? If not, what changes would you make to improve it?

Some of the answers:

Yes they are structured in an efficient way

Yea it is efficient and nothing is needed to be changed

Yes they are reasonable and easy to understand for anyone else looking at the database

Yes, looks good, the fact it is within one database and the password is encrypted

The naming conventions are appropriate and security was considered via password hashing

My question:

Please look at the naming conventions and the folder structure. Is it somewhat clear? How easy would that be to continue working on the project in case of reassigning it to you?

Some of the answers:

It looks very clear as a technical user and like how it separated in different folder

It is clear and well structured. it might take some time to understand the namings but it will be pretty easy to continue working on the project.

the naming conventions are very clear and they would help any other developer once they're working on it

The folder structure is clear to understand as files are segmented according to their respective languages.

Based on the average answers, I can see, that the way I left the project it could be picked up easily by other technical people, which will greatly benefit my client. As well as that I can see that the database structure is good, which is a very important aspect of the backend.

In conclusion, most of the feedback was positive, which shows the success of the prototype, however there are some areas that need improvement, and therefore will be addressed in the future development or before the project goes live. To see specific issues to be addressed, please see the above sections.

 Microsoft Forms

Task 3b

Introduction

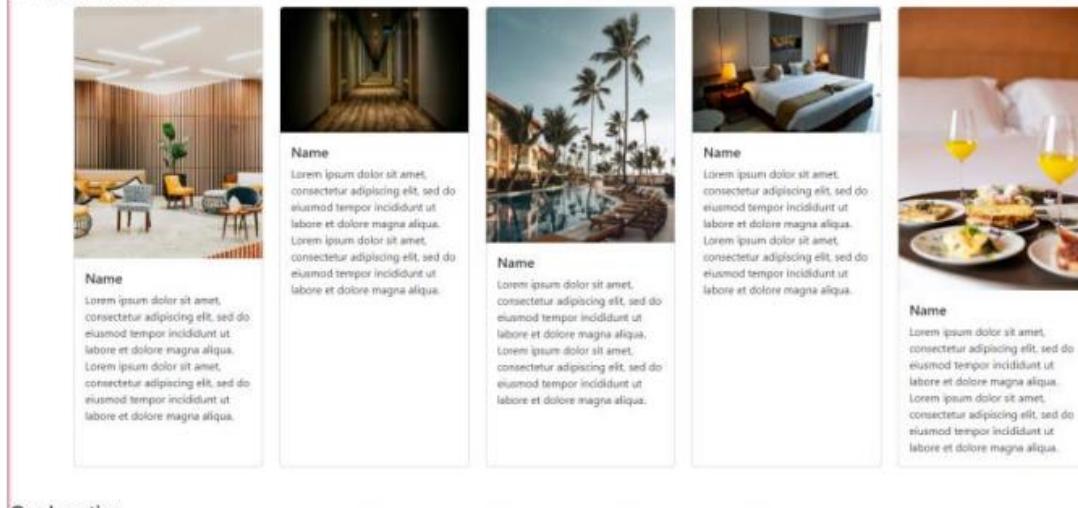

In this passage, I will be evaluating the effectiveness of the digital solution that I've been developing during this assessment period and how it meets requirements. As well as that I will be sharing my ideas as to how the solution can be developed further.

The effectiveness of the assets and content used:

The reasoning behind selection

Most of the assets on the website were chosen in the design stage and then implemented during development. I have carefully chosen all of them, to make sure they are a good representation of my client – RZA adventures.

Our Facilities

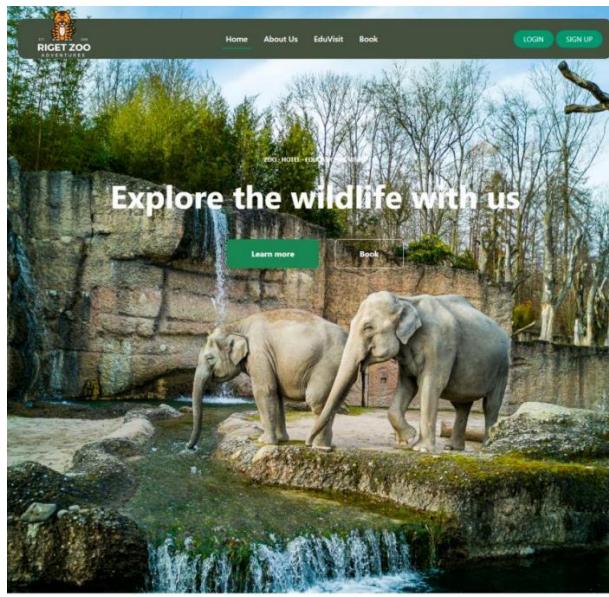

Some of the assets like hotel pictures for our facilities section shown above, were chosen slightly later in the process, as I have decided to add this section after the beginning of the development.

Home page background:

I have chosen this specific background for various reasons such as:

- It is a good representation of the zoo, and user can very quickly understand what this website is for, when gathering feedback, I have established that the average user can understand the purpose of the website very quickly. Therefore, it seems now like this picture suites just right.
- It helps to emphasize that RZA is wild safari zoo
- It has a good contrast, thus suitable for different types of end users
- It fits the colour palate that I have previously chosen perfectly

Even though this background seems to me a good solution, it is worth mentioning that is can be easily changed when needed. For example, maybe my client will decide on a different background for different seasons, all that needs to be done is replacing image in the assets folder.

We offer a range of educational activities

EduVisit

About page

On the about page I have added four sections: animals, opening times, facilities and location.

All those sections have some assets included. For example, Animals section has handful of animal pictures in there. I have chosen these assets in order to capture the eye of the potential customers, as well as that it will give the end user a chance to see what they are up for if they decide to visit RZA.

Our Animals

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.</small>

In opening times section, I have carefully chosen the background to emphasize on the amazing experience end users can get if they decide to visit rza.

For our facilities I have chosen different types of pictures to show the overall experience they will get in rza hotel.

In location section I have embedded Google map API. I have decided to do so to make the website more interactive and to enhance user experience.

For the booking pages I have chosen relevant background, for example if you are booking a ticket the background will show the zoo, but if you are booking a room the background will be a hotel lobby, which will make user experience more intuitive and smoother. It will also prevent user from mistakenly booking a wrong ticket.

For User page I have chosen a nice animals flamingos background, however I covered it with black opacity 0.5 shade in order to make sure that it is not distracting user.

The validity and reliability

For all the assets I have used a reliable source such as unsplash, for API I have used Google API. Because I have not added any content like RZA history, information about animals or facilities, there is no risk of invalid information, once the content is provided by the client, then it is going to be added to the website. Specifically, to prevent erroneous information and content on the website I have used Lorem ipsum text as a placeholder in all the places that require some info.

Legal and ethical implications

All the background pictures and icons are Copy right free, therefore legal to use and there is no need to change them before the deployment, unless the client has its own pictures that would like to be used instead. As for the content once again, I think it would be completely unethical to just copy it from competitors' website or just have it written by the AI and therefore I have used placeholders instead.

How the digital solution meets the requirements of the solution

Functional and non-functional requirements

Functional requirements

In my proposal I have stated that the system should include:

- Home page
- About page
- Educational visit page
- Booking System
- Login/Signup/Account system

The solution that I have produced meets all those requirements. I have developed the website that I very close to the initial designs and proposal.

It has the homepage, about page with all 4 required sections: Opening times, Our animals, Hotel info, how to get here. EduVisit page that has main section where the user can browse the catalogue of useful materials (now they are just placeholders, however when content is provided by the client it will contain all that is required). Booking System that has a main page where user can choose what to book: a room or a ticket. Then user is directed to that page. I have changed the logic of the system from the initial design. In the initial proposal I have proposed to make a system that would ask user for details like email and name every time that the booking is made. However, while developing the solution, I realised that this is not the best way to go about it. Instead, the system now checks if the user is signed in, if not kindly asks to sign in or create account first and then to make a booking. In the way, the database is well structured and is easy to track KPI's for my client, however it is also useful for users as it is much quicker and prevents from entering wrong details.

Login system has been developed exactly like I proposed, and I have used same required inputs that I previously proposed, please see below.

Personal Account

The system should allow user to create an account, or sign in, if the account already exists. Once signed in to their account user should be able to manage their bookings ex. cancel, user should also see previous stays and rewards. The system should allow user to log out once needed.

User input requirements to create an account:

User input requirements to login into the account:

The screenshot shows a user profile page for 'jhon5555'. At the top, there's a navigation bar with links for Home, About Us, EduVisit, Book, and a sign-in/out section. Below the navigation is a banner featuring a tiger logo and the text 'RIGET ZOO ADVENTURES'. The main content area has a dark background with a faint image of flamingos. It displays a welcome message 'Welcome to your account jhon5555' and three tabs: Bookings, Visits, and Loyalty Points. Under 'Your Room Bookings', there's a table with three rows:

Booking Id	Room Id	Booked From	Booked To	Cancel
2	2	2024-04-16	2024-04-26	<button>Cancel</button>
3	3	2024-04-16	2024-04-28	<button>Cancel</button>
4	1	2024-04-21	2024-05-11	<button>Cancel</button>

Under 'Your Ticket Bookings', there's another table with two rows:

Booking Id	Ticket Id	Visit Date	Cancel
1	1	2024-04-26	<button>Cancel</button>
2	2	2024-04-24	<button>Cancel</button>

Non-functional requirements

Security considerations

The system should be secure and robust:

- System must validate all data inputs.
- System must use secure cookies.
- System must use SHA256 Encryption for the passwords.

All the inputs are validated on the backend level, I have essentially considered both types of validation: frontend(html) validation and backend validation. I have chosen to go with backend validation as it is the most secure method. It prevents malicious users from submitting wrong data using developer tools in browser, whereas html does not protect from this.

System uses secure cookies.

The solution contains signup/login system, I made sure it is secure by hashing all the passwords using SHA256 Encryption before they reach the database and then they're stored in that way.

Accessibility features

- The system should be straightforward to use, both for the end-users and the content editors that oversee backend system.
- System should be adapted to different user needs: the system should be following Web Content
- Accessibility (WCAG) guidelines

All of those requirements are met in the solution. Before starting to develop the prototype, I have made sure that my previous design is inclusive for different types of users. For example, I have checked if all the colours and contrasts are accepted by the WCAG by using online checker.

Another example would be a map API that is easier to use than just a small text in the footer stating the location.

As well as that, I made sure that the website is easy and intuitive to navigate. I have added “walk through” and validation messages all throughout the website. For example, once user clicked on register and wants to switch to sign in, there are two ways to do so, first is to click on the “Already a member? Login” or just to click on the sign up in the navigation bar.

KPI's

For the moment it is just a prototype, and it has no users to track KPI's. For example, KPI's like bounce rate or average time on the page are not yet sensible as it has not been deployed and runs on the localhost. However, it has a working login system and booking system, and all that data is stored on the database in the different tables. By analysing this data business can have insights on how many new users there are, what is the percentage of the users that booked a ticket online or booked a room or both. For example, it would be useful to know the tendency in relations between booking the ticket and the room to understand what RZA get more revenue from. As well as that, RZA could track how many bookings were made per month as I have included automatic timestamps for all the records, and then analyse positive and negative trends. Because I have added those timestamps for when each account is created RZA can also track how many inactive accounts there are and potentially delete them after a year or so.

How the prototype could be developed further

First of all, in further development there should be all the required content added, as for this solution I have not provided the content like animals' info, hotel info. Before deploying this info should be added.

Secondly, because of the security considerations I have not added the feature to buy a ticket or pay for the room in advance. However, I think it would be a sensible feature to have as some users may want to do just that.

Thirdly, it was my intention to develop a rewards system, for example when the user, has three visits to the zoo in her/his account, they get a free visit next or discount on the room, which is a good stimulation for customers. However, in this scope I was not able to develop it. Once the user page is displayed after logging in, there is a placeholder for “Loyalty points” though. Therefore, once it is developed it will be very beneficial feature for the RZA to have.

Another feature, that I consider to be a great feature is Animal API, that could be added to the education page. For example, user is interested in a particular animal, he/she enters the name of the animal and some interesting facts about the animal will be displayed.

Finally, the hosting of the website, currently it is running on the localhost. But to be a live projected it should be deployed.
